(54) Title: PYRAZOLYL-INDOLE DERIVATIVES ACTIVE AS KINASE INHIBITORS, PROCESS FOR THEIR PREPARATION AND PHARMACEUTICAL COMPOSITIONS COMPRISING THEM

(I)

(57) Abstract: Pyrazolyl-indole derivatives of formula (I) as defined in the specification, and pharmaceutically acceptable salts thereof, process for their preparation and pharmaceutical compositions comprising them are disclosed; the compounds of the invention may be useful, in therapy, in the treatment of diseases associated with a dysregulated protein kinase activity, like cancer.

TITLE OF THE INVENTION

5 PYRAZOLYL-INDOLE DERIVATIVES ACTIVE AS KINASE INHIBITORS, PROCESS FOR  
THEIR PREPARATION AND PHARMACEUTICAL COMPOSITIONS COMPRISING THEM

10

BACKGROUND OF THE INVENTIONField of the invention

15 The present invention relates to indole derivatives and, more in particular, to pyrazolyl-indole derivatives active as kinase inhibitors, to a process for their preparation, to pharmaceutical compositions comprising them and to their use as therapeutic agents, particularly in the treatment of diseases linked to dysregulated protein kinases.

Discussion of the background

20 The malfunctioning of protein kinases (PKs) is the hallmark of numerous diseases. A large share of the oncogenes and proto-oncogenes involved in human cancers code for PKs. The enhanced activities of PKs are also implicated in many non-malignant diseases, such as benign prostate hyperplasia, familial adenomatosis, polyposis, neuro-fibromatosis, psoriasis, vascular smooth cell proliferation associated with atherosclerosis, pulmonary fibrosis, arthritis glomerulonephritis and post-surgical stenosis and restenosis.

25

PKs are also implicated in inflammatory conditions and in the multiplication of viruses and parasites. PKs may also play a major role in the pathogenesis and development of neurodegenerative disorders.

30

For a general reference to PKs malfunctioning or dysregulation see, for instance, Current Opinion in Chemical Biology 1999, 3, 459 - 465.

### SUMMARY OF THE INVENTION

5 It is an object of the invention to provide compounds which are useful in therapy as agents against a host of diseases caused by and/or associated to a dysregulated protein kinase activity.

10 It is another object to provide compounds which are endowed with protein kinase inhibiting activity.

The present inventors have now discovered that some pyrazolyl-indoles, and derivatives thereof, are endowed with protein kinase inhibiting activity and are thus useful in therapy in the treatment of diseases associated with dysregulated protein kinases.

15 More specifically, the compounds of this invention are useful in the treatment of a variety of cancers including, but not limited to: carcinoma such as bladder, breast, colon, kidney, liver, lung, including small cell lung cancer, esophagus, gall-bladder, ovary, pancreas, stomach, cervix, thyroid, prostate, and skin, including squamous cell carcinoma; hematopoietic tumors of lymphoid lineage, including leukemia, acute lymphocytic leukemia, acute lymphoblastic leukemia, B-cell lymphoma, T-cell-lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma, hairy cell lymphoma and Burkett's lymphoma; hematopoietic tumors of myeloid lineage, including acute and chronic myelogenous leukemias, myelodysplastic syndrome and promyelocytic leukemia; tumors of mesenchymal origin, including fibrosarcoma and rhabdomyosarcoma; tumors of the central and peripheral nervous system, including  
20 astrocytoma, neuroblastoma, glioma and schwannomas; other tumors, including melanoma, seminoma, teratocarcinoma, osteosarcoma, xeroderma pigmentosum, keratoxanthoma, thyroid follicular cancer and Kaposi's sarcoma.

30 Due to the key role of PKs in the regulation of cellular proliferation, these pyrazolyl-indoles are also useful in the treatment of a variety of cell proliferative disorders such as, for instance, benign prostate hyperplasia, familial adenomatosis, polyposis, neuro-fibromatosis, psoriasis, vascular smooth cell proliferation associated with atherosclerosis, pulmonary fibrosis, arthritis glomerulonephritis and post-surgical stenosis and restenosis.

The compounds of the invention can be useful in the treatment of Alzheimer's disease, as suggested by the fact that cdk5 is involved in the phosphorylation of tau protein (J. Biochem., 117, 741-749, 1995).

5 The compounds of this invention, as modulators of apoptosis, may also be useful in the treatment of cancer, viral infections, prevention of AIDS development in HIV-infected individuals, autoimmune diseases and neurodegenerative disorders.

The compounds of this invention may be useful in inhibiting tumor angiogenesis and metastasis, as well as in the treatment of organ transplant rejection and host versus graft  
10 disease.

The compounds of the invention may also act as inhibitor of other protein kinases, e.g., cyclin-dependent kinases (cdk) such as cdk2 and cdk5, protein kinase C in different isoforms, Met, PAK-4, PAK-5, ZC-1, STLK-2, DDR-2, Aurora 1, Aurora 2, Bub-1, PLK, Chk1, Chk2, HER2,  
15 raf1, MEK1, MAPK, EGF-R, PDGF-R, FGF-R, IGF-R, PI3K, weel kinase, Src, Abl, Akt, MAPK, ILK, MK-2, IKK-2, Cdc7, Nek, and thus be effective in the treatment of diseases associated with other protein kinases.

The compounds of the invention are also useful in the treatment and prevention of  
20 radiotherapy-induced or chemotherapy-induced alopecia.

Several heterocyclic compounds are known in the art as therapeutic agents or even as protein kinase inhibitors.

25 Among them are some pyrazole derivatives disclosed in the international patent applications WO 01/12189, WO 01/12188, WO 02/48114, WO 02/070515, WO 99/32455 and WO 02/062804, all in the name of the Applicant itself and herewith incorporated by reference.

Indole derivatives further substituted by indazolyl groups have been also disclosed as protein  
30 kinase inhibitors in WO 01/53268 and WO 01/02369; benzodiazepine derivatives substituted by indolyl moieties and possessing cdk2 inhibitory activity have been disclosed in WO 00/64900; pyrazolone derivatives possessing protein kinase inhibitory activity have been disclosed in WO 01/32653; pyrazolyl-indoles substituted by propenone groups in position 3 of the indole moiety have been disclosed as antitumor agents in WO 95/14003.

Indole derivatives among which are indolyl-indazoles as possessing tyrosine kinase inhibitory activity are also disclosed in WO 03/024969.

- 5 Benzimidazole derivatives endowed with KDR protein kinase inhibitory activity are disclosed in WO 03/035644.

In addition to the above, general formula compounds comprising pyrazole derivatives are known in the art as antitumor, antimicrobial or fungicide agents, as well as for the treatment  
 10 and prophylaxis of anaemias or as factor Xa inhibitors, for instance as disclosed in WO 97/28158, WO 00/39108, WO 00/46207, WO 00/46208, WO 01/82930 and in Chemical Abstracts C.A.88(1978):31980.

Accordingly, the present invention provides a method for treating diseases caused by and/or  
 15 associated with an altered protein kinase activity, by administering to a mammal in need thereof an effective amount of a compound of formula (I)

wherein

- R** is hydrogen, halogen, nitro, cyano, hydroxy, or it is a group optionally further substituted  
 20 selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl or C<sub>1</sub>-C<sub>6</sub> alkoxy, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl, heterocyclyl, or it is a group -NR'R'', -CONR'R'', -NR'COR'', -COOR' or -SO<sub>2</sub>NR'R'', wherein R' and R'' are, the same or different and independently in each occasion, a hydrogen atom or a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl or heterocyclyl; or, taken together with the nitrogen atom to  
 25 which they are attached, R' and R'' may form a 5 or 6 membered nitrogen containing heterocycle, optionally comprising one additional heteroatom selected among N, O or S;  
**R<sub>1</sub>** has the meanings above reported to R but other than hydroxy;  
**m** is an integer from 1 to 4;  
**n** is 1 or 2;  
 30 and the pharmaceutically acceptable salts thereof.

In a preferred embodiment of the method described above, the disease caused by and/or associated with an altered protein kinase activity is selected from the group consisting of cancer, cell proliferative disorders, Alzheimer's disease, viral infections, autoimmune diseases and neurodegenerative disorders.

Specific types of cancer that may be treated include carcinoma, squamous cell carcinoma, hematopoietic tumors of myeloid or lymphoid lineage, tumors of mesenchymal origin, tumors of the central and peripheral nervous system, melanoma, seminoma, teratocarcinoma, osteosarcoma, xeroderma pigmentosum, keratoxanthoma, thyroid follicular cancer and Kaposi's sarcoma.

In another preferred embodiment of the method described above, the cell proliferative disorder is selected from the group consisting of benign prostate hyperplasia, familial adenomatosis polyposis, neuro-fibromatosis, psoriasis, vascular smooth cell proliferation associated with atherosclerosis, pulmonary fibrosis, arthritis glomerulonephritis and post-surgical stenosis and restenosis.

The present invention further provides a compound of formula (I)

wherein

**R** is hydrogen, halogen, nitro, cyano, hydroxy, or it is a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl or C<sub>1</sub>-C<sub>6</sub> alkoxy, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl, heterocyclyl, or it is a group -NR'R'', -CONR'R'', -NR'COR'', -COOR' or -SO<sub>2</sub>NR'R'', wherein R' and R'' are, the same or different and independently in each occasion, a hydrogen atom or a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl or heterocyclyl; or, taken together with the nitrogen atom to which they are attached, R' and R'' may form a 5 or 6 membered nitrogen containing heterocycle, optionally comprising one additional heteroatom selected among N, O or S;

**R<sub>1</sub>** has the meanings above reported to R but other than hydroxy;

**m** is an integer from 1 to 4;

n is 1 or 2;

and the pharmaceutically acceptable salts thereof.

#### DETAILED DESCRIPTION OF THE INVENTION

- 5 The compounds of formula (I), object of the present invention, may have asymmetric carbon atoms and may therefore exist either as racemic admixtures or as individual optical isomers. Accordingly, all the possible isomers and their admixtures and of both the metabolites and the pharmaceutically acceptable bio-precursors (otherwise referred to as pro-drugs) of the compounds of formula (I), as well as any therapeutic method of treatment comprising them,  
10 are also within the scope of the present invention.

In the present description, unless otherwise indicated, with the term halogen atom we intend a fluorine, chlorine, bromine or iodine atom.

- 15 With the term straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl or alkoxy we intend a group such as, for instance, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, tert-butyl, n-pentyl, n-hexyl, methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, isobutoxy, sec-butoxy, tert-butoxy, n-pentyloxy, n-hexyloxy, and the like.
- 20 With the term C<sub>3</sub>-C<sub>6</sub> cycloalkyl we intend a group such as cyclopropyl, cyclobutyl, cyclopentyl or cyclohexyl.

- With the term aryl we intend a mono- or bi- either carbocyclic as well as heterocyclic hydrocarbon with from 1 to 2 ring moieties, either fused or linked to each other by single  
25 bonds, wherein at least one of the carbocyclic or heterocyclic rings is aromatic.

- Non limiting examples of aryl groups are, for instance, phenyl, indanyl, biphenyl,  $\alpha$ - or  $\beta$ -naphthyl, pyridyl, pyrazinyl, pyrimidinyl, pyridazinyl, 1,3,5-triazinyl, indolyl, imidazolyl, inimidazopyridyl, 1,2-methylenedioxyphenyl, thiazolyl, isothiazolyl, pyrrolyl, pyrrolyl-phenyl, furyl,  
30 phenyl-furyl, benztetrahydrofuranyl, oxazolyl, isoxazolyl, pyrazolyl, chromenyl, thienyl, benzothienyl, isoindolinyl, benzoimidazolyl, benzoxazolyl, benzothiazolyl, isoindolinyl-phenyl, quinolinyl, isoquinolinyl, quinoxalinyl, pyrazinyl, benzofurazanyl, 1,2,3-triazolyl, 1-phenyl-1,2,3-triazolyl, and the like.

With the term heterocycle or heterocyclyl we intend a 5 or 6 membered heterocycle, hence encompassing aromatic heterocyclic groups also referred to as heteroaryl groups and being comprised within the meanings of aryl. In addition, with the term heterocyclyl we further intend a saturated or partially unsaturated 5 or 6 membered carbocycle wherein one or more carbon  
5 atoms are replaced by 1 to 3 heteroatoms or heteroatomic groups such as N, NR', O or S, wherein R' is as defined in the general formula.

Additional examples of 5 or 6 membered heterocyclyl groups optionally benzocondensed or further substituted, besides those previously referred to as aryl groups, are 1,3-dioxolane,  
10 pyran, pyrrolidine, pyrroline, imidazolidine, pyrazolidine, pyrazoline, piperidine, piperazine, morpholine, tetrahydrofuran, and the like.

Moreover, R may also represent a functional group linked to the benzene moiety of the compound of formula (I), being selected from amino (-NR'R"), amido (-CONR'R" or  
15 -NR'COR"), sulfonamido (-SO<sub>2</sub>NR'R") or carboxy (-COOR'), wherein R' and R" are as above defined.

According to this latter aspect, it is clear to the skilled person that in the case of R (or R<sub>1</sub>) being defined as a group -NR'R", -CONR'R" or -SO<sub>2</sub>NR'R", R' and R" groups may be also combined  
20 together so as to form a 5 or 6 membered heterocyclic ring, at least containing the nitrogen atom to which R' and R" are bonded and, optionally, an additional heteroatom selected among N, O or S.

Non limiting examples of the said heterocycles may thus comprise, for instance, pyrrole,  
25 pyrazole, imidazole, pyrrolidine, pyrroline, imidazolidine, imidazoline, pyrazolidine, pyrazoline, piperidine, piperazine, morpholine, and the like.

As set forth in the general formula, R<sub>1</sub> is a group linked to the pyrazole moiety of the compound of formula (I), having any one of the meanings provided to R other than hydroxy.  
30

From all of the above, it is clear to the skilled person that the compounds of formula (I) may bear from 1 to 4 R groups in positions 4,5,6 and 7; and 1 or 2 R<sub>1</sub> groups in positions 3' and 4', according to the numbering system below:

According to the above meanings provided to R, R<sub>1</sub>, R' and R'', any of the said groups may be further optionally substituted in any of the free positions by one or more groups, for instance 1 to 6 groups, selected from: halogen, nitro, oxo groups (=O), carboxy, cyano, alkyl, perfluorinated alkyl, hydroxyalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heterocyclyl, amino groups and derivatives thereof such as, for instance, alkylamino, dialkylamino, cycloalkylamino, arylamino, diarylamino, arylalkylamino, ureido, alkylureido or arylureido; carbonylamino groups and derivatives thereof such as, for instance, formylamino, alkylcarbonylamino, alkenylcarbonylamino, arylcarbonylamino, alkoxycarbonylamino; hydroxy groups and derivatives thereof such as, for instance, alkoxy, aryloxy, heterocyclyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkenyloxy or alkylideneaminooxy; carbonyl groups and derivatives thereof such as, for instance, alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, cycloalkyloxycarbonyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl; sulfurated derivatives such as, for instance, alkylthio, arylthio, alkylsulfonyl, arylsulfonyl, alkylsulfinyl, arylsulfinyl, arylsulfonyloxy, aminosulfonyl, alkylaminosulfonyl or dialkylaminosulfonyl. In their turn, whenever appropriate, each of the above groups may be further substituted by one or more of the aforementioned groups.

With the term perfluorinated alkyl we intend a straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl group as above defined, wherein all hydrogen atoms are replaced by fluorine atoms. Example of perfluorinated alkyl groups are, for instance, trifluoromethyl, 2,2,2-trifluoroethyl, 1,2-difluoroethyl, 1,1,1,3,3,3-hexafluoropropyl-2-yl and the like.

With the term alkenyl or alkynyl we intend a straight or branched unsaturated hydrocarbon chain with from 2 to 6 carbon atoms, having a double or triple bond such as, for instance, vinyl, ethynyl, 1-propenyl, allyl, 1- or 2-propynyl, 1-, 2- or 3-butenyl, 1-, 2- or 3-butylnyl, pentenyl, pentynyl, hexenyl, hexynyl and the like.

From all of the above, it is clear to the skilled person that any group whose name has been identified as a composite name such as, for instance, cycloalkylalkyl, arylalkyl,

heterocyclalkyl, alkoxy, alkylthio, aryloxy, arylalkoxy, heterocycloxy, heterocyclalkoxy, alkylcarbonyloxy and the like, has to be intended as conventionally construed from the parts to which they derive.

- 5 As an example, the term heterocyclalkyl stands for an alkyl group being further substituted by a heterocycl group, wherein alkyl and heterocycl are as above defined.

Pharmaceutically acceptable salts of the compounds of formula (I) are the acid addition salts with inorganic or organic, e.g. nitric, hydrochloric, hydrobromic, sulfuric, perchloric, phosphoric,  
 10 acetic, trifluoroacetic, propionic, glycolic, lactic, oxalic, malonic, malic, maleic, tartaric, citric, benzoic, cinnamic, mandelic, methanesulfonic, isethionic and salicylic acid, as well as the salts with inorganic or organic bases, e.g. alkali or alkaline-earth metals, especially sodium, potassium, calcium or magnesium hydroxides, carbonates or bicarbonates, acyclic or cyclic amines, preferably methylamine, ethylamine, diethylamine, triethylamine or piperidine.

15

When referring to the compounds of formula (I) of the invention, it is also clear to the skilled person that the unsubstituted ring nitrogen pyrazole is known to rapidly equilibrate, in solution, as a mixture of tautomers of formula (Ia) and (Ib) which are both comprised within the scope of the invention

20

A first class of preferred compounds of the invention is represented by the derivatives of formula (I) wherein R is a hydrogen or halogen atom, R<sub>1</sub> is a hydrogen atom or a group selected from cyano, -COOR' or -CONR'R'', wherein R' and R'' have the above reported meanings, and m and n are both 1.

25

Another class of preferred compounds of the invention is represented by the derivatives of formula (I) wherein R is a group -COOR' or -CONR'R'', wherein R' and R'' have the above reported meanings, R<sub>1</sub> is hydrogen, and m and n are both 1.

For a general reference to any specific example of the compounds of formula (I) of the invention, whenever appropriate in the form of pharmaceutically acceptable salts, see the experimental section and claims.

- 5 As set forth above, it is a further object of the present invention a process for preparing the compounds of formula (I) which may be carried out either in solution, according to a classical synthetic approach or, alternatively, under solid-phase-synthesis (SPS) conditions. These latter conditions are particularly advantageous when preparing libraries of compounds according to combinatorial chemistry techniques, for instance as reported below.

10

Therefore, the compounds of formula (I) and the pharmaceutically acceptable salts thereof may be prepared by a process comprising:

- a) coupling, in the presence of a suitable catalyst, the compound of formula (II) with the compound of formula (III)

15

20

wherein R, R<sub>1</sub>, m and n are as above defined; Q and Q', the same or different from each other, may represent suitable nitrogen protective groups or polymeric solid supports; X is a halogen atom or a group selected from methylsulfonyloxy, trifluoromethylsulfonyloxy, phenylsulfonyloxy or fluoro-sulphate (-OSO<sub>2</sub>F); and Z is selected from halogen, boronic acid, boronate, trialkylstannane, trihalostannane, zinc halide, cuprate, alkyldihalo-silane or a Grignard salt; so as to obtain a compound of formula (IV)

- b) optionally converting the compound of formula (IV) into another compound of formula (IV);  
and

c) deprotecting or cleaving from the resin Q and Q' the compound of formula (IV), so as to obtain the compound of formula (I) and, whenever desired, converting it into a pharmaceutically acceptable salt thereof.

- 5 According to step (a) of the process, the reaction between the compounds of formula (II) and (III) is carried out in the presence of a suitable catalyst such as, for instance, tetrakis(triphenylphosphine)palladium, tris(dibenzylideneacetone)dipalladium, palladium chloride, bis(triphenylphosphine)palladium chloride, palladium acetate, nickel chloride, 1,2-bis (diphenylphosphino) ethane nickel chloride, dichlorobis(tributylphosphine)nickel, nickel  
10 acetylacetonate and of a suitable ligand such as triphenylphosphine, tri-2-furylphosphine, tributylphosphine, 2-dicyclohexylphosphino-2'-(N,N-dimethylamino)biphenyl, triphenylarsine.

- The reaction is carried out under basic conditions, for instance in the presence of sodium carbonate, potassium carbonate, cesium carbonate, thallium carbonate, sodium hydroxide,  
15 barium hydroxide, triethylamine or diisopropylethylamine, in a suitable solvent such as dimethoxyethane, tetrahydrofuran, ethanol, water, toluene, ethanol or 4-dioxane, at a temperature ranging from room temperature to refluxing temperature, for a suitable time varying from about 30 minutes to about 96 hours.

- 20 Preferably, this reaction is carried out with tetrakis(triphenylphosphine)palladium as the catalyst, and thallium carbonate as the base.

According to a preferred embodiment, within the compounds of formula (II) and (III), X is a iodine atom and Z is a boronic acid  $[-B(OH)_2]$  or tributyl stannane.

- 25 As far as Q and Q' are concerned, they may represent a suitable nitrogen protecting group such as, for instance, trityl, trimethylsilylethoxymethyl (SEM), tert-butoxycarbonyl (boc), ethylcarbamate or trichloroethylcarbamate. Alternatively, one or both of Q and Q' may also represent a suitable inert polymeric resin otherwise defined as polymeric solid support such as,  
30 for instance, trityl resin, chloro-trityl resin, methylisocyanate resin, p-nitrophenyl carbonate Wang resin, isocyanate polystyrenic resin or the like, which are all conventionally known in this field.

Preferably, Q represents a trimethylsilylethoxymethyl or ethylcarbamate group or it is a trityl resin and Q' is tert-butoxycarbonyl or trimethylsilylethoxymethyl.

For a general reference on aryl-aryl cross coupling reactions, as per step (a) of the process,  
5 see Miyaura, Norio et al., Palladium-Catalyzed Cross-Coupling Reactions of Organoboron Compounds [Chemical Reviews (1995), 95(7), 2457-83]; and Hassan, Jwanro et al., Aryl-Aryl Bond Formation One Century after the Discovery of the Ullmann Reaction [Chemical Reviews (2002), 102(5), 1359-1469].

10 The compounds of formula (IV) thus obtained may be then converted in a variety of ways, according to step (b) of the process, into other compounds of formula (IV), by working according to conventional methods.

As an example, the compounds of formula (IV) wherein any one of R and R<sub>1</sub> is a group  
15 -COOR' wherein R' is as above defined, may be converted into the corresponding derivatives of formula (IV) wherein R' is hydrogen. The above reaction is carried out according to conventional methods which enable, for instance, hydrolysis of carboxy ester groups, e.g. under basic conditions in the presence of suitable bases such as sodium, potassium or lithium hydroxide, and in a suitable solvent such as N,N-dimethylformamide, methanol, ethanol,  
20 tetrahydrofuran, water, and mixtures thereof. Typically, the reaction is carried out at temperatures ranging from room temperature to refluxing temperature and for a time varying from about 30 minutes to about 96 hours.

Likewise, the compounds of formula (IV) thus obtained and wherein any one of R and R<sub>1</sub> is a  
25 group -COOH may be then converted into a variety of derivatives bearing the corresponding -CONR'R" group wherein R' and R" are as above defined. Also this reaction is carried out according to well known methods for preparing carboxamides and may comprise, for instance, the reaction of the above carboxylic acid derivative with a suitable amine HNR'R".

30 Typically, this reaction is carried out in the presence of a coupling agent such as, for instance, benzotriazol-1-yloxytris(pyrrolidino)phosphonium-hexafluorophosphate-carbodiimide, 1,3-dicyclohexylcarbodiimide, bromo-tris-pyrrolidino-phosphonium hexafluorophosphate, 1,3-diisopropylcarbodiimide, o-benzotriazol-1-yl-N,N,N',N'-tetramethyluronium tetrafluoroborate, 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide, N-cyclohexylcarbodiimide-N'-propyloxymethyl

polystyrene or N-cyclohexylcarbodiimide-N'-methyl polystyrene, in a suitable solvent such as, for instance, dichloromethane, chloroform, tetrahydrofuran, diethyl ether, 1,4-dioxane, acetonitrile, toluene or N,N-dimethylformamide, at a temperature ranging from about -10°C to refluxing temperature and for a time varying from about 30 minutes to about 96 hours. The  
5 said reaction is optionally carried out in the presence of a suitable catalyst, for instance 4-dimethylaminopyridine or, alternatively, in the presence of a further coupling reagent such as N-hydroxybenzotriazole.

Alternatively, the above carboxamide preparation may be also accomplished through a mixed  
10 anhydride method, that is by using an alkyl chloroformate such as ethyl, iso-butyl or isopropyl chloroformate, in the presence of a tertiary base such as triethylamine, N,N-diisopropylethylamine or pyridine, in a suitable solvent such as, for instance, toluene, dichloromethane, chloroform, tetrahydrofuran, acetonitrile, diethyl ether, 1,4-dioxane, or N,N-dimethylformamide, and at a temperature ranging from about -30°C to room temperature.

15 From all of the above, it is also clear to the skilled person that any group R or R<sub>1</sub>, as well as any one of the optional substituents which are part of R, R<sub>1</sub>, R' or R'' and which are further susceptible of being converted into other groups may also lead to a variety of derivatives.

20 As a non limiting example, carboxy groups may be converted into a variety of derivatives including esters and amides; carboxamides may undergo reductive amination to amino derivatives; amines may be further acylated in a variety of ways to other carboxamides; alkylthio groups may be oxidized to alkylsulfonyl groups or even replaced by amino or alkoxy groups and derivatives thereof; nitro groups can be reduced to amines; and the like.

25 For a general reference to any one of the above reactions and which have been here conveniently grouped into step (b) of the process, see the experimental section.

According to step (c) of the process, the compound of formula (IV) is then deprotected from  
30 the Q and Q' groups.

The above reaction is widely known in the art and is accomplished under acidic or basic conditions, depending upon the nature of the Q and Q' groups themselves.

As an example of deprotection under acidic conditions, the compound of formula (IV) being obtained in step (b) may be treated with hydrochloric or trifluoroacetic acid.

5 Preferably, for instance in the case Q is trimethylsilylethoxymethyl, or trityl resin and Q' is tert-butoxycarbonyl or trimethylsilylethoxymethyl, the reaction occurs by using a solution of hydrochloric acid at a concentration ranging from 0.5 to 3N in methanol, at a temperature varying from about 0°C to refluxing temperature, and for a time of about 5 minutes to about 2 hours.

10 In step (c), deprotection or resin cleavage may be also carried out, depending upon the nature of the Q and Q' groups, under basic conditions.

As an example, the reaction may be carried out in the presence of aqueous potassium or sodium hydroxide and in the presence of a suitable co-solvent such as methanol, ethanol, N,N-dimethylformamide, 1,4-dioxane or acetonitrile, so as to yield the desired compound of formula (I). The compound of formula (IV) may be thus suspended in a solution of 35% of sodium or potassium hydroxide, for instance in methanol, by working under mild operative conditions, for instance at temperatures ranging from about 5°C to about 60°C and for a time varying from about 2 hours to about a few days.

20

The starting material of formula (II) of the process is known or can be easily obtained according to known methods, for instance as per following scheme (a):

Scheme (a): preparation of the compounds of formula (II)

25 A suitable amino-pyrazole derivative may thus undergo diazotation reaction according to known methods by means of sodium nitrite, tert-butyl nitrite or, preferably, isoamyl nitrite; the diazonium salt is then replaced by a suitable X group through reaction with a proper copper(I) halide such as, for instance,  $\text{CuCl}$ ,  $\text{CuBr}$ ,  $\text{CuI}$ , a trimethylsilyl chloride, bromide, iodide or even with iodine itself. Preferably, the reaction is carried out with isoamyl nitrite and diiodomethane

at a temperature ranging from about 0°C to about 150°C and for a time varying from about 5 minutes to about 24 hours.

Subsequent protection at the pyrazole nitrogen atom or loading onto a solid support so as to yield the compound of formula (II) is also carried out according to known methods.

As an example, the intermediate pyrazole (-NH-) compound may be protected as trimethylsilylethoxymethyl (-NQ-) by reacting it with 2-(trimethylsilyl)ethoxymethyl chloride in the presence of sodium hydride, in a suitable solvent such as, for instance, tetrahydrofuran, diethyl ether, 1,4-dioxane, dichloromethane, chloroform, or N,N-dimethylformamide, at a temperature ranging from about 0°C to room temperature and for a suitable time varying from about 30 minutes to about 96 hours.

Also the compounds of formula (III) are known or may be easily prepared according to known methods (see, for example, J. Chem. Soc. Perkin Trans., 1. 2000; 11, 1705–14), for instance as set forth in scheme (b) below:

Scheme (b): preparation of the compounds of formula (III)

The nitrogen protected or otherwise polymer supported indole derivative, is prepared according to known methods, essentially as above reported in scheme (a) for the pyrazole intermediate.

The subsequent functionalization to yield the compound of formula (III) is then carried out in the presence of a base such as, for instance, n-butyllithium, sec-butyllithium, tert-butyllithium, lithium diisopropylamide, lithium 2,2,6,6-tetramethylpiperidide or a metal such as magnesium or lithium, followed by quenching with a suitable trialkylborate, dioxaborolane, halotrialkyltin, zinc chloride, alkyl trihalosilane. The reaction is carried out in a suitable solvent like tetrahydrofuran, diethylether, dioxane or dimethoxyethane, at a temperature ranging from about 0°C to 40°C and for a suitable time varying from about 5 minutes to about 2 hours.

Preferably, the base is either n-butyllithium or lithium 2,2,6,6-tetramethylpiperidide. When the Z group is a boronic acid  $[-B(OH)_2]$ , quenching is followed by hydrolysis with hydrochloric acid. In addition to the above, any protecting group, polymeric resin or any other reactant of the process of the invention, in any variant thereof, is known or can be prepared according to known methods.

According to an alternative approach, the compounds of formula (I) of the invention may be also prepared as per the synthetic pathway below, which represents a further object of the invention.

Therefore, the compounds of formula (I) and the pharmaceutically acceptable salts thereof may be prepared by a process comprising:

d) reacting a hydrazine derivative of formula (V) with a pyrazole derivative of formula (VI)

wherein R,  $R_1$ , m and n are as above defined, so as to obtain a compound of formula (VII)

e) reacting the compound of formula (VII) under acidic conditions and in the presence of a Lewis acid, so as to obtain a compound of formula (I); and,

f) optionally converting it into another compound of formula (I) and/or into a pharmaceutically acceptable salt thereof.

According to step (d) of the process, the reaction between the compounds of formula (V) and (VI) is carried out in the presence of catalytic amounts of a suitable acid such as, for instance, hydrochloric, acetic, sulfuric or p-toluenesulfonic acid, and in a solvent such as methanol, ethanol, benzene, toluene or the like.

According to step (e) of the process, the compound of formula (VII) is treated with a suitable acid such as, for instance, polyphosphoric or acetic acid, or even mixtures of acetic and hydrochloric acid; the Lewis acid is, for instance, zinc chloride, boron trifluoride, triethylaluminum or trifluoroacetic anhydride. Preferably, the reaction is carried out in the presence of polyphosphoric acid, by operating at temperatures ranging from about 0°C to refluxing temperature and for a suitable time varying from about 30 minutes to about 96 hours.

The obtained compound of formula (I) may be then reacted, according to step (f) of the process, into another derivative of formula (I) by properly converting any desired R and R<sub>1</sub> group into another R and R<sub>1</sub> group, and/or into a pharmaceutically acceptable salt.

The operative conditions of step (f) are those previously reported in steps (b) and (c) of the former synthetic process.

The compounds of formula (V) and (VI) are known or can be easily prepared according to known methods.

From all of the above, it is clear to the skilled person that when preparing the compounds of formula (I) according to any process variant, which are all to be intended as within the scope of the present invention, optional functional groups within the starting materials, the reagents or the intermediates thereof and which could give rise to unwanted side reactions, need to be properly protected according to conventional techniques.

Likewise, the conversion of these latter into the free deprotected compounds may be carried out according to known procedures.

By analogy, pharmaceutically acceptable salts of the compounds of formula (I) or, alternatively, their free compounds from the salts thereof, may be all obtained according to conventional methods.

Likewise, it is also clear to the person skilled in the art that if a compound of formula (I), prepared according to the above processes, is obtained as an admixture of isomers, their separation into the single isomers of formula (I), carried out according to conventional techniques, is still within the scope of the present invention.

As formerly indicated, the compounds of formula (I) of the invention may be conveniently prepared according to combinatorial chemistry techniques widely known in the art, by accomplishing the aforementioned reactions between the several intermediates in a serial manner and by working under SPS conditions.

Accordingly, it is a further object of the present invention a library of two or more compounds of formula (I)

wherein

**R** is hydrogen, halogen, nitro, cyano, hydroxy, or it is a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl or C<sub>1</sub>-C<sub>6</sub> alkoxy, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl, heterocyclyl, or it is a group -NR'R'', -CONR'R'', -NR'COR'', -COOR' or

-SO<sub>2</sub>NR'R'', wherein R' and R'' are, the same or different and independently in each occasion, a hydrogen atom or a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl or heterocyclyl; or, taken together with the nitrogen atom to which they are attached, R' and R'' may form a 5 or 6 membered nitrogen containing heterocycle, optionally comprising one additional heteroatom selected among N, O or S;

**R<sub>1</sub>** has the meanings above reported to **R** but other than hydroxy;

**m** is an integer from 1 to 4;

**n** is 1 or 2;

and the pharmaceutically acceptable salts thereof.

From all of the above, it is clear to the skilled person that once a library of pyrazolyl-indoles is thus prepared, for instance consisting of several hundreds of compounds of formula (I), the said library can be very advantageously used for screening towards given kinases, as formerly reported.

See, for a general reference to libraries of compounds and uses thereof as tools for screening biological activities, J. Med. Chem. 1999, 42, 2373-2382; and Bioorg. Med. Chem. Lett. 10 (2000), 223-226.

5

#### PHARMACOLOGY

The compounds of formula (I) are active as protein kinase inhibitors and are therefore useful, for instance, to restrict the unregulated proliferation of tumor cells.

10 In therapy, they may be used in the treatment of various tumors, such as those formerly reported, as well as in the treatment of other cell proliferative disorders such as psoriasis, vascular smooth cell proliferation associated with atherosclerosis and post-surgical stenosis and restenosis and in the treatment of Alzheimer's disease.

15 The inhibiting activity of putative cdk/cyclin inhibitors and the potency of selected compounds is determined through a method of assay based on the use of the SPA technology (Amersham Pharmacia Biotech).

20 The assay consists of the transfer of radioactivity labelled phosphate moiety by the kinase to a biotinylated substrate. The resulting <sup>33</sup>P-labelled biotinylated product is allowed to bind to streptavidin-coated SPA beads (biotin capacity 130 pmol/mg), and light emitted was measured in a scintillation counter.

#### Inhibition assay of cdk2/Cyclin A activity

25 **Kinase reaction:** 4  $\mu$ M in house biotinylated histone H1 (Sigma # H-5505) substrate, 10  $\mu$ M ATP (0.1 microCi <sup>33</sup>P- $\gamma$ -ATP), 1.1 nM Cyclin A/CDK2 complex, inhibitor in a final volume of 30  $\mu$ l buffer (TRIS HCl 10 mM pH 7.5, MgCl<sub>2</sub> 10 mM, DTT 7.5 mM + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After incubation for 60 min at room temperature, the reaction was stopped by addition of 100  $\mu$ l PBS buffer containing 32 mM EDTA, 500  $\mu$ M cold ATP, 0.1% Triton X100 and 10mg/ml streptavidin coated SPA beads. After 20 min incubation, 110  
30  $\mu$ L of suspension were withdrawn and transferred into 96-well OPTIPLATEs containing 100  $\mu$ l of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

**IC50 determination:** inhibitors were tested at different concentrations ranging from 0.0015 to 10  $\mu$ M. Experimental data were analyzed by the computer program GraphPad Prizm using the four parameter logistic equation:

$$y = \text{bottom} + (\text{top} - \text{bottom}) / (1 + 10^{((\log \text{IC}_{50} - x) \cdot \text{slope}))})$$

- 5 where x is the logarithm of the inhibitor concentration, y is the response; y starts at bottom and goes to top with a sigmoid shape.

#### **Ki calculation:**

**Experimental method:** Reaction was carried out in buffer (10 mM Tris, pH 7.5, 10 mM  $\text{MgCl}_2$ , 0.2 mg/ml BSA, 7.5 mM DTT) containing 3.7 nM enzyme, histone and ATP (constant ratio of cold/labeled ATP 1/3000). Reaction was stopped with EDTA and the substrate captured on phosphomembrane (Multiscreen 96 well plates from Millipore). After extensive washing, the multiscreen plates were read on a top counter. Control (time zero) for each ATP and histone concentrations was measured.

15

**Experimental design:** Reaction velocities are measured at four ATP, substrate (histone) and inhibitor concentrations. An 80-point concentration matrix was designed around the respective ATP and substrate  $K_m$  values, and the inhibitor  $\text{IC}_{50}$  values (0.3, 1, 3, 9 fold the  $K_m$  or  $\text{IC}_{50}$  values). A preliminary time course experiment in the absence of inhibitor and at the different ATP and substrate concentrations allows the selection of a single endpoint time (10 min) in the linear range of the reaction for the  $K_i$  determination experiment.

20

**Kinetic parameter estimates:** Kinetic parameters were estimated by simultaneous nonlinear least-square regression using [Eq.1] (competitive inhibitor respect to ATP, random mechanism) using the complete data set (80 points):

25

$$v = \frac{V_m \cdot A \cdot B}{\alpha \cdot K_a \cdot K_b + \alpha \cdot K_a \cdot B + \alpha \cdot K_b \cdot A + A \cdot B + \alpha \cdot \frac{K_a}{K_i} \cdot I \cdot (K_b + \frac{B}{\beta})} \quad [\text{Eq.1}]$$

30

where A=[ATP], B=[Substrate], I=[inhibitor],  $V_m$ = maximum velocity,  $K_a$ ,  $K_b$ ,  $K_i$  the dissociation constants of ATP, substrate and inhibitor respectively.  $\alpha$  and  $\beta$  the cooperativity factor between substrate and ATP binding and substrate and inhibitor binding respectively.

In addition the selected compounds are characterized on a panel of ser/thre kinases strictly related to cell cycle (cdk2/cyclin E, cdk1/cyclin B1, cdk5/p25, cdk4/ cyclin D1), and also for specificity on MAPK, PKA, EGFR, IGF1-R, Aurora-2 and Cdc 7.

5     **Inhibition assay of cdk2/Cyclin E activity**

**Kinase reaction:** 10  $\mu$ M in house biotinylated histone H1 (Sigma # H-5505) substrate, 30  $\mu$ M ATP (0.3 microCi  $P^{33}\gamma$ -ATP), 4 ng GST-Cyclin E/CDK2 complex, inhibitor in a final volume of 30  $\mu$ l buffer (TRIS HCl 10 mM pH 7.5,  $MgCl_2$  10 mM, DTT 7.5 mM + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After incubation for 60 min at room temperature, the  
10     reaction was stopped by addition of 100  $\mu$ l PBS buffer containing 32 mM EDTA, 500  $\mu$ M cold ATP, 0.1% Triton X100 and 10mg/ml streptavidin coated SPA beads. After 20 min incubation, 110  $\mu$ L of suspension were withdrawn and transferred into 96-well OPTIPLATEs containing 100  $\mu$ l of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

15

**IC50 determination:** see above

**Inhibition assay of cdk1/Cyclin B1 activity**

**Kinase reaction:** 4  $\mu$ M in house biotinylated histone H1 (Sigma # H-5505) substrate, 20  $\mu$ M ATP (0.2 microCi  $P^{33}\gamma$ -ATP), 3 ng Cyclin B/CDK1 complex, inhibitor in a final volume of 30  $\mu$ l  
20     buffer (TRIS HCl 10 mM pH 7.5,  $MgCl_2$  10 mM, DTT 7.5 mM + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After 20 min at r.t. incubation, reaction was stopped by 100  $\mu$ l PBS + 32 mM EDTA + 0.1% Triton X-100 + 500  $\mu$ M ATP, containing 1 mg SPA beads. Then a volume of 110  $\mu$ l is transferred to Optiplate.

25     After 20 min. incubation for substrate capture, 100  $\mu$ l 5M CsCl were added to allow statification of beads to the top of the Optiplate and let stand 4 hours before radioactivity counting in the Top-Count instrument.

**IC50 determination:** see above

30     **Inhibition assay of cdk5/p25 activity**

The inhibition assay of cdk5/p25 activity is performed according to the following protocol.

**Kinase reaction:** 10  $\mu$ M biotinylated histone H1 (Sigma # H-5505) substrate, 30  $\mu$ M ATP (0.3 microCi  $P^{33}\gamma$ -ATP), 15 ng CDK5/p25 complex, inhibitor in a final volume of 30  $\mu$ l buffer (TRIS

HCl 10 mM pH 7.5, MgCl<sub>2</sub> 10 mM, DTT 7.5 mM + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After incubation for 35 min at room temperature, the reaction was stopped by addition of 100 µl PBS buffer containing 32 mM EDTA, 500 µM cold ATP, 0.1% Triton X100 and 10 mg/ml streptavidin coated SPA beads. After 20 min incubation, 110 µL of suspension were withdrawn and transferred into 96-well OPTIPLATES containing 100 µl of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

**IC50 determination:** see above

**Inhibition assay of cdk4/Cyclin D1 activity**

**Kinase reaction:** 0,4 µM mouse GST-Rb (769-921) (# sc-4112 from Santa Cruz) substrate, 10 µM ATP (0.5 µCi P<sup>33</sup>γ-ATP), 100 ng of baculovirus expressed GST-cdk4/GST-Cyclin D1, suitable concentrations of inhibitor in a final volume of 50 µl buffer (TRIS HCl 10 mM pH 7.5, MgCl<sub>2</sub> 10 mM, 7.5 mM DTT+ 0.2mg/ml BSA) were added to each well of a 96 U bottom well-plate. After 40 min at 37 °C incubation, reaction was stopped by 20 µl EDTA 120 mM.

**Capture:** 60 µl were transferred from each well to MultiScreen plate, to allow substrate binding to phosphocellulose filter. Plates were then washed 3 times with 150 µl/well PBS Ca<sup>++</sup>/Mg<sup>++</sup> free and filtered by MultiScreen filtration system.

**Detection:** filters were allowed to dry at 37°C, then 100 µl/well scintillant were added and <sup>33</sup>P labeled Rb fragment was detected by radioactivity counting in the Top-Count instrument.

**IC50 determination:** see above

**Inhibition assay of MAPK activity**

**Kinase reaction:** 10 µM in house biotinylated MBP (Sigma # M-1891) substrate, 15 µM ATP (0.15 microCi P<sup>33</sup>γ-ATP), 30 ng GST-MAPK (Upstate Biothechnology # 14-173), inhibitor in a final volume of 30 µl buffer (TRIS HCl 10 mM pH 7.5, MgCl<sub>2</sub> 10 mM, DTT 7.5 mM + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After incubation for 35 min at room temperature, the reaction was stopped by addition of 100 µl PBS buffer containing 32 mM EDTA, 500 µM cold ATP, 0.1% Triton X100 and 10mg/ml streptavidin coated SPA beads. After 20 min incubation, 110 µL of suspension were withdrawn and transferred into 96-well

OPTIPLATES containing 100 µl of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

**IC50 determination:** see above

5     **Inhibition assay of PKA activity**

**Kinase reaction:** 10 µM in house biotinylated histone H1 (Sigma # H-5505) substrate, 10 µM ATP (0.2 microM  $P^{33}\gamma$ -ATP), 0.45 U PKA (Sigma # 2645), inhibitor in a final volume of 30 µl buffer (TRIS HCl 10 mM pH 7.5,  $MgCl_2$  10 mM, DTT 7.5 mM + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After incubation for 90 min at room temperature, the reaction was stopped by addition of 100 µl PBS buffer containing 32 mM EDTA, 500 µM cold ATP, 0.1% Triton X100 and 10mg/ml streptavidin coated SPA beads. After 20 min incubation, 110 µL of suspension were withdrawn and transferred into 96-well OPTIPLATES containing 100 µl of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

15    **IC50 determination:** see above

**Inhibition assay of EGFR activity**

**Kinase reaction:** 10 µM in house biotinylated MBP (Sigma # M-1891) substrate, 2 µM ATP (0.04 microCi  $P^{33}\gamma$ -ATP), 36 ng insect cell expressed GST-EGFR, inhibitor in a final volume of 30 µl buffer (Hepes 50 mM pH 7.5,  $MgCl_2$  3 mM,  $MnCl_2$  3 mM, DTT 1 mM,  $NaVO_3$  3 µM, + 0.2 mg/ml BSA) were added to each well of a 96 U bottom. After incubation for 20 min at room temperature, the reaction was stopped by addition of 100 µl PBS buffer containing 32 mM EDTA, 500 µM cold ATP, 0.1% Triton X100 and 10mg/ml streptavidin coated SPA beads. After 20 min incubation, 110 µL of suspension were withdrawn and transferred into 96-well OPTIPLATES containing 100 µl of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

**IC50 determination:** see above

**Inhibition assay of IGF1-R activity**

30    The inhibition assay of IGF1-R activity is performed according to the following protocol.

**Enzyme activation:** IGF1-R must be activated by auto-phosphorylation before starting the experiment. Just prior to the assay, a concentrated enzyme solution (694 nM) is incubated for

half a hour at 28°C in the presence of 100 µM ATP and then brought to the working dilution in the indicated buffer.

5     **Kinase reaction:** 10 µM biotinylated IRS1 peptide (PRIMM) substrate, 0-20 µM inhibitor, 6 µM ATP, 1 microCi <sup>33</sup>P-ATP, and 6 nM GST-IGF1-R (pre-incubated for 30 min at room temperature with cold 60 µM cold ATP) in a final volume of 30 µl buffer (50 mM HEPES pH 7.9, 3 mM MnCl<sub>2</sub>, 1 mM DTT, 3 µM NaVO<sub>3</sub>) were added to each well of a 96 U bottom well plate. After incubation for 35 min at room temperature, the reaction was stopped by addition of 100 µl PBS buffer containing 32 mM EDTA, 500 µM cold ATP, 0.1% Triton X100 and 10mg/ml streptavidin coated SPA beads. After 20 min incubation, 110 µL of suspension were withdrawn and transferred into 96-well OPTIPLATES containing 100 µl of 5M CsCl. After 4 hours, the plates were read for 2 min in a Packard TOP-Count radioactivity reader.

**Inhibition assay of Aurora-2 activity**

15     **Kinase reaction:** 8 µM biotinylated peptide (4 repeats of LRRWSLG), 10 µM ATP (0.5 µCi P<sup>33</sup>γ-ATP), 7.5 ng Aurora 2, inhibitor in a final volume of 30 µl buffer (HEPES 50 mM pH 7.0, MgCl<sub>2</sub> 10 mM, 1 mM DTT, 0.2 mg/ml BSA, 3 µM orthovanadate) were added to each well of a 96 U bottom well plate. After 60 minutes at room temperature incubation, reaction was stopped and biotinylated peptide captured by adding 100 µl of bead suspension.

20     **Stratification:** 100 µl of CsCl 5 M were added to each well and let stand 4 hour before radioactivity was counted in the Top-Count instrument.

**IC50 determination:** see above

25     **Inhibition assay of Cdc7/dbf4 activity**

The inhibition assay of Cdc7/dbf4 activity is performed according to the following protocol.

The Biotin-MCM2 substrate is trans-phosphorylated by the Cdc7/Dbf4 complex in the presence of ATP traced with γ<sup>33</sup>-ATP. The phosphorylated Biotin-MCM2 substrate is then captured by Streptavidin-coated SPA beads and the extent of phosphorylation evaluated by β counting.

30     The inhibition assay of Cdc7/dbf4 activity was performed in 96 wells plate according to the following protocol.

To each well of the plate were added:

- 10 µl substrate (biotinylated MCM2, 6 µM final concentration)
- 10 µl enzyme (Cdc7/Dbf4, 17.9 nM final concentration)
- 10 µl test compound (12 increasing concentrations in the nM to µM range to generate a dose-response curve)
- 5    - 10 µl of a mixture of cold ATP (2 µM final concentration) and radioactive ATP (1/5000 molar ratio with cold ATP) was then used to start the reaction which was allowed to take place at 37°C.

Substrate, enzyme and ATP were diluted in 50 mM HEPES pH 7.9 containing 15 mM MgCl<sub>2</sub>, 2  
10    mM DTT, 3 µM NaVO<sub>3</sub>, 2mM glycerophosphate and 0.2mg/ml BSA. The solvent for test compounds also contained 10% DMSO.

After incubation for 60 minutes, the reaction was stopped by adding to each well 100 µl of PBS  
-pH 7.4 containing 50 mM EDTA, 1 mM cold ATP, 0.1% Triton X100 and 10 mg/ml streptavidin  
15    coated SPA beads.

After 20 min incubation, 110 µL of suspension were withdrawn and transferred into 96-well  
OPTIPLATES containing 100 µl of 5M CsCl. After 4 hours, the plates were read for 2 min in a  
Packard TOP-Count radioactivity reader.

20    **IC<sub>50</sub> determination:** see above.

The compounds of formula (I) of the present invention, suitable for administration to a  
mammal, e.g. to humans, can be administered by the usual routes and the dosage level  
depends upon the age, weight, conditions of the patient and the administration route.  
25

For example, a suitable dosage adopted for oral administration of a compound of formula (I)  
may range from about 10 to about 500 mg pro dose, from 1 to 5 times daily.

The compounds of the invention can be administered in a variety of dosage forms, e.g. orally,  
30    in the form of tablets, capsules, sugar or film coated tablets, liquid solutions or suspensions;  
rectally in the form of suppositories; parenterally, e.g. intramuscularly, or by intravenous and/or  
intrathecal and/or intraspinal injection or infusion.

In addition, the compounds of the invention can be administered either as single agents or, alternatively, in combination with known anticancer treatments such as radiation therapy or chemotherapy regimen in combination with cytostatic or cytotoxic agents, antibiotic-type agents, alkylating agents, antimetabolite agents, hormonal agents, immunological agents, interferon-type agents, cyclooxygenase inhibitors (e.g. COX-2 inhibitors), metallomatrixprotease inhibitors, telomerase inhibitors, tyrosine kinase inhibitors, anti-growth factor receptor agents, anti-HER agents, anti-EGFR agents, anti-angiogenesis agents, farnesyl transferase inhibitors, ras-raf signal transduction pathway inhibitors, cell cycle inhibitors, other cdk inhibitors, tubulin binding agents, topoisomerase I inhibitors, topoisomerase II inhibitors and the like, optionally within liposomal formulations thereof.

If formulated as a fixed dose, such combination products employ the compounds of this invention within the dosage range described above and the other pharmaceutically active agent within the approved dosage range.

Compounds of formula (I) may be used sequentially with known anticancer agents when a combination formulation is inappropriate.

The present invention also includes pharmaceutical compositions comprising a compound of formula (I) or a pharmaceutically acceptable salt thereof in association with a pharmaceutically acceptable excipient (which can be a carrier or a diluent).

The pharmaceutical compositions containing the compounds of the invention are usually prepared following conventional methods and are administered in a pharmaceutically suitable form.

For example, the solid oral forms may contain, together with the active compound, diluents, e.g. lactose, dextrose, saccharose, sucrose, cellulose, corn starch or potato starch; lubricants, e.g. silica, talc, stearic, magnesium or calcium stearate, and/or polyethylene glycols; binding agents, e.g. starches, arabic gum, gelatin, methylcellulose, carboxymethylcellulose or polyvinyl pyrrolidone; disaggregating agents, e.g. a starch, alginic, alginates or sodium starch glycolate; effervescing mixtures; dyestuffs; sweeteners; wetting agents such as lecithin, polysorbates, laurylsulfates; and, in general, non-toxic and pharmacologically inactive substances used in pharmaceutical formulations. Said pharmaceutical preparations may be manufactured in

known manner, for example, by means of mixing, granulating, tableting, sugar-coating, or film-coating processes.

The liquid dispersions for oral administration may be e.g. syrups, emulsions and suspensions.

- 5 The syrups may contain as carrier, for example, saccharose or saccharose with glycerin and/or mannitol and/or sorbitol.

The suspensions and the emulsions may contain as carrier, for example, a natural gum, agar, sodium alginate, pectin, methylcellulose, carboxymethylcellulose, or polyvinyl alcohol.

10

The suspension or solutions for intramuscular injections may contain, together with the active compound, a pharmaceutically acceptable carrier, e.g. sterile water, olive oil, ethyl oleate, glycols, e.g. propylene glycol, and, if desired, a suitable amount of lidocaine hydrochloride. The solutions for intravenous injections or infusions may contain as carrier, for example, sterile  
15 water or preferably they may be in the form of sterile, aqueous, isotonic saline solutions or they may contain as a carrier propylene glycol.

The suppositories may contain together with the active compound a pharmaceutically acceptable carrier, e.g. cocoa butter, polyethylene glycol, a polyoxyethylene sorbitan fatty ester  
20 surfactant or lecithin.

The following examples are herewith intended to better illustrate the present invention without posing any limitation to it.

25

## Experimental Part

### General Methods

- Flash chromatography was performed on silica gel (Merck grade 9385, 60Å). HPLC/MS was performed on a Waters X Terra RP 18 (4.6 x 50 mm, 3.5 µm) column using a Waters 2790 HPLC system equipped with a 996 Waters PDA detector and a Micromass mod. ZQ single  
30 quadrupole mass spectrometer, equipped with an electrospray (ESI) ion source. Mobile phase A was ammonium acetate 5 mM buffer (pH 5.5 with acetic acid / acetonitrile 95:5), and Mobile phase B was H<sub>2</sub>O / acetonitrile (5:95). Gradient from 10 to 90% B in 8 minutes, hold 90% B 2 min. UV detection at 220 nm and 254 nm. Flow rate 1 ml/min. Injection volume 10 µl. Full scan, mass range from 100 to 800 amu. Capillary voltage was 2.5 KV; Source temp. was

120°C; Cone was 10 V. Retention Times (HPLC r.t.) are given in minutes at 220 nm or 254 nm. Mass are given as m/z ratio.

When necessary, compounds have been purified by Preparative HPLC on a Waters Symmetry C18 (19 x 50 mm, 5µm) column using a Waters preparative HPLC 600 equipped with a 996 Waters PDA detector and a Micromass mod. ZMD single quadrupole mass spectrometer, electrospray ionisation, positive mode. Mobile phase A was water 0.01% TFA, and Mobile phase B was acetonitrile. Gradient from 10 to 90%B in 8 min, hold 90%B 2 min. Flow rate 20 ml/min.

<sup>1</sup>H-NMR spectroscopy was performed on a Mercury VX 400 operating at 400.45 MHz equipped with a 5mm double resonance probe (1H {15N-31P} ID\_PFG Varian).

#### Example 1

##### **Ethyl 3-iodo-1H-pyrazole-4-carboxylate**

To a stirred mixture of 3.2 g (20 mmol) of ethyl 5-amino-1H-pyrazole-4-carboxylate in 95 mL of CH<sub>2</sub>I<sub>2</sub> at -10°C, 24 mL of isoamyl nitrite (180 mmol) were added during 30 minutes. The mixture was stirred two hours at 100°C and, after cooling, it was concentrated under reduced pressure (first 10 mmHg then 0.1 mmHg). The residue was dissolved in ethyl acetate and the resulting solution washed with Na<sub>2</sub>S<sub>2</sub>O<sub>5</sub>, HCl (1N) and water. Organic phase was separated, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated under reduced pressure to give a brown solid that was purified by column chromatography, eluting with 30% ethyl acetate in hexane to give 4.11 g (75%) of the title compound as a yellow solid.

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.71 (s, 1H), 8.25 (s, 1H), 4.19 (q, 2H), 1.26 (t, 3H)

[M+H]<sup>+</sup> = 267

By operating as above described and by employing 5-amino-1H-pyrazole-4-carbonitrile in place of ethyl 5-amino-1H-pyrazole-4-carboxylate, the following compound was prepared:

##### **3-iodo-1H-pyrazole-4-carbonitrile**

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.71 (s, 1H), 8.51 (s, 1H),

[M+H]<sup>+</sup> = 219

### Example 2

#### **Ethyl 3-iodo-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazole-4-carboxylate**

Sodium Hydride (60% suspension in mineral oil, 0.3 g, 7.5 mmol) was suspended in dry THF (20 mL) under argon. The mixture was cooled at 0°C and ethyl 5-iodo-1H-pyrazole-4-carboxylate (1.7g, 7.5 mmol) in dry THF (20mL) was added. The mixture was then stirred at room temperature for 1 hour and after cooling at 0°C a solution of 2-(trimethylsilyl)ethoxymethyl chloride (1.3 mL, 7.5 mmol) in dry THF (5 mL) was added. After stirring at room temperature for 1.5 hours, water was added, the organic layer separated and the aqueous phase was extracted with ethyl acetate. The combined organic layers were dried over Na<sub>2</sub>SO<sub>4</sub> and evaporated under vacuum affording 2.6 g of a crude oil which was chromatographed on silica gel eluting with 10% ethyl acetate in hexane. The fractions containing the title compound were evaporated giving rise to 0.4 g (13%) of the title compound as a colorless oil.

1H-NMR (DMSOd6), diagnostic signals (ppm): 7.99 (s, 1H), 5.51 (s, 2H), 4.22 (q, 2H), 3.55 (t, 2H), 1.27 (t, 3H), 0.82 (t, 2H), -0.07 (s, 9H).

[M+H]<sup>+</sup> = 397

By continuing the elution with 10% ethylacetate in hexane, 2.2 g (74%) of the following compound were obtained:

#### **Ethyl 3-iodo-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazole-4-carboxylate**

1H-NMR (DMSOd6), diagnostic signals (ppm): 8.43 (s, 1H), 5.4 (s, 2H), 4.215 (q, 2H), 3.53 (t, 2H), 1.26 (t, 3H), 0.81 (t, 2H), -0.06 (s, 9H).

[M+H]<sup>+</sup> = 397

### Example 3

#### **Ethyl 4-cyano-3-iodo-1H-pyrazole-1-carboxylate**

A solution of 5-iodo-1H-pyrazole-4-carbonitrile (0.5 g 2.3 mmol) in diisopropylethylamine (0.88 g, 6.8 mmol) and anhydrous THF (20 mL) was cooled at 0°C and ethyl chloroformate (0.3 g, 2.7 mmol) was added. The solution was stirred at 0°C for 1 hour then partitioned between water and ethyl acetate. The combined extracts were dried (Na<sub>2</sub>SO<sub>4</sub>) and evaporated in vacuo to give a crude solid. Chromatography eluting with 30% ethyl acetate in hexane gave 0.64 g (86%) of ethyl 4-cyano-3-iodo-1H-pyrazole-1-carboxylate as a white solid.

1H-NMR (DMSOd6), diagnostic signals (ppm): 9.14 (s, 1H), 4.45 (q, 2H), 1.34 (t, 3H).  
[M+H]<sup>+</sup> = 292

#### Example 4

5 **Tert-butyl 2-(4-(ethoxycarbonyl)-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazol-3-yl)-1H-indole-1-carboxylate**

To a stirred solution of ethyl 3-iodo-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazole-4-carboxylate (50.0 mg, 0.13 mmol) and tetrakis-(triphenylphosphine)palladium (0) (15 mg, 0.013 mmol) in 1,2-dimethoxyethane (100 ml), 1-(tert-butoxycarbonyl)-1H-indol-2-ylboronic acid (52 mg, 0.2 mmol) and tallium carbonate (236 mg, 0.5 mmol) were added. The mixture  
10 was heated under argon at 80°C for 12 hours, then cooled and partitioned between water and ethyl acetate. The combined extracts were dried (Na<sub>2</sub>SO<sub>4</sub>) and evaporated in vacuo to give a crude oil. Chromatography eluting with 20% ethyl acetate in hexane gave 5-[1-(tert-butoxycarbonyl)-1H-indol-2-yl]-1-[[2-(trimethylsilyl) ethoxy]methyl]-1H-pyrazole-4-carboxylic  
15 acid (21 mg, 35%) as a yellow oil.

1H-NMR (DMSOd6), diagnostic signals (ppm): 8.59 (s, 1H), 8.145 (d, 1H), 7.62 (d, 1H), 7.35 (t, 1H), 7.25 (t, 1H), 6.71 (s, 1H), 5.49 (s, 2H), 4.03 (q, 2H), 3.63 (q, 2H), 1.31 (s, 9H), 1.02 (t, 3H), 0.87 (q, 2H), -0.03 (s, 9H).

[M+H]<sup>+</sup> = 487

20

#### Example 5

**3-(1H-indol-2-yl)-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazole-4-carboxylic acid**

A solution of tert-butyl 2-(4-(ethoxycarbonyl)-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazol-3-yl)-1H-indole-1-carboxylate (0.5 g, 1 mmol) in EtOH (10 mL) and NaOH 2N (2.5 mL) was  
25 refluxed for 2 hours. After cooling the solution was concentrated, treated with water, acidified with HCl and extracted with EtOAc. Organic phase was washed with water, dried (Na<sub>2</sub>SO<sub>4</sub>) and evaporated to give a crude solid. Purification by flash chromatography (CH<sub>2</sub>Cl<sub>2</sub>/CH<sub>3</sub>OH 95:5) afforded 0.28 g of the title compound as a brown solid (70%).

1H-NMR (DMSOd6), diagnostic signals (ppm): 12.75 (br, 1H), 11.65 (br, 1H), 8.55 (s, 1H),  
30 7.56 (d, 1H), 7.45 (d, 1H), 7.28 (s, 1H), 7.10 (t, 1H), 7.98 (t, 1H), 5.49 (s, 2H), 3.62 (t, 2H), 0.87 (t, 2H), -0.04 (s, 9H).

[M+H]<sup>+</sup> = 358

**Example 6****3-(1H-indol-2-yl)-1H-pyrazole-4-carboxylic acid**

5-(1H-indol-2-yl)-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazole-4-carboxylic acid (100 mg  
5 0.28 mmol) was treated with 4 M HCl in dioxane (3 mL) and MeOH (3mL) at room temperature for 2 hours. The mixture was concentrated, basified with saturated sodium bicarbonate to pH 6 and filtered to give a crude solid. Purification by flash chromatography afforded 50.8 mg of the title compound as a brown solid (80%).

1H-NMR (DMSOd6), diagnostic signals (ppm): 11.55 (s, 1H), 8.15 (s, 1H), 7.57 (d, 1H), 7.47 (d,  
10 1H), 7.2 (s, 1H), 7.12 (t, 1H), 7.02 (t, 1H).

[M+H]<sup>+</sup> = 228

**Example 7****Ethyl 3-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate**

15 A solution of 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylic acid (0.2 g, 0.9 mmol) in ethanol (5 mL) and H<sub>2</sub>SO<sub>4</sub> 96% (0.3 mL) was refluxed overnight. After cooling the solution was concentrated, treated with water, basified with concentrated NaHCO<sub>3</sub> and extracted with EtOAc. Organic phase was washed with water, dried (Na<sub>2</sub>SO<sub>4</sub>) and evaporated to give a crude solid. Purification by flash chromatography (Hexane/EtOAc 1:1) afforded 0.19 g of the title  
20 compound as a white solid (85%)

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.77 (s, 1H), 11.5 (s, 1H), 8.32 (s, 1H), 7.60 (d, 1H), 7.52 (d, 1H), 7.29 (s, 1H), 7.15 (t, 1H), 7.04 (t, 1H), 4.33 (q, 2H), 1.34 (s, 1H).

[M+H]<sup>+</sup> = 256

**Example 8****3-(1H-indol-2-yl)-1H-pyrazole-4-carbonitrile**

By operating as reported for tert-butyl 2-(4-(ethoxycarbonyl)-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazol-3-yl)-1H-indole-1-carboxylate but employing ethyl 4-cyano-3-iodo-1H-pyrazole-1-carboxylate instead of 5-iodo-1-[[2-(trimethylsilyl)ethoxy]methyl]-1H-pyrazole-4-carboxylate,  
30 the title compound was obtained (50% yield).

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.89 (s, 1H), 11.59 (s, 1H), 8.68 (s, 1H), 7.59 (d, 1H), 7.41 (d, 1H), 7.12 (t, 1H), 7.03-6.98 (m, 2H).

[M+H]<sup>+</sup> = 209

**Example 9****3-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide**

To a mixture of 3-(1H-indol-2-yl)-1H-pyrazole-4-carboxylic acid (35 mg, 0.15 mmol),  
5 benzotriazol-1-yloxytris(pyrrolidino)phosphonium hexafluorophosphate (PyBOP, 120 mg, 0.23 mmol), 1-hydroxybenzotriazole (HOBt, 30 mg, 0.23 mmol) and N,N-diisopropylethylamine (105 mcL, 0.6 mmol) in DMF (2 mL), NH<sub>4</sub>Cl (16.5 mg, 0.3 mmol) was added one pot. The resulting mixture was stirred at room temperature overnight. The solvent was evaporated and the residue was dissolved in EtOAc. The EtOAc solution was extracted with 1N HCl, washed with  
10 brine, extracted with saturated NaHCO<sub>3</sub>, and dried over Na<sub>2</sub>SO<sub>4</sub>. Filtration and evaporation of the solvent gave a crude solid that was purified by preparative chromatography, affording the desired amide as a solid 30 mg (86%).

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 8.25 (br, 1H), 7.95 (br, 1H), 7.55 (d, 1H), 7.47 (s, 1H), 7.46 (d, 1H), 7.13-7.03 (m, 2H), 7 (t, 1H).

15 [M+H]<sup>+</sup> = 227

By operating in an analogous way and by using benzylamine in place of NH<sub>4</sub>Cl, the following compound, as a white solid (80% yield), was obtained:

**N-benzyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide**

20 <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.9 (br, 1H), 9.06 (br, 1H), 8.33 (br, 1H), 7.55 (dd, 2H), 7.4-7.32 (m, 4H), 7.3-7.23 (m, 1H), 7.2-7.07 (m, 2H), 7.03 (t, 1H), 4.57 (d, 2H).

[M+H]<sup>+</sup> = 317.

**Example 10****4-[(2E)-2-[1-(1H-pyrazol-3-yl)ethylidene]hydrazino]benzonitrile**

A mixture of 3-acetylpyrazole hydrochloride (0.6 g, 3.5 mmol) and 4-cyanophenylhydrazine hydrochloride (0.52 g, 3.5 mmol) in EtOH (4 ml) was heated to boiling for 5 hours. After cooling at 0°C the precipitate was filtered and washed thoroughly with cold ethanol. After drying, the desired hydrazone was obtained as a yellow solid (0.7 g, 88% yield).

30 <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 9.82 (s, 1H), 7.67 (d, 1H), 7.61 (s, 2H), 7.37 (d, 2H), 6.63 (d, 1H), 2.31 (s, 3H).

[M+H]<sup>+</sup> = 226

By working in an analogous way the following compounds were obtained:

**(1E)-1-(1H-pyrazol-3-yl)ethanone phenylhydrazone**

yellow solid (95% yield)

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 7.79 (s, 1H), 7.28 (d, 2H), 7.19 (t, 2H), 6.74 (t, 2H), 6.65 (s, 1H), 2.25 (s, 3H).

[M+H]<sup>+</sup> = 201.

5 **(1E)-1-(1H-pyrazol-3-yl)ethanone (4-chlorophenyl)hydrazone**

yellow solid (80% yield)

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 9.31 (s, 1H), 7.64 (d, 1H), 7.29-7.21 (m, 4H), 6.57 (d, 1H), 2.25 (s, 3H).

[M+H]<sup>+</sup> = 235.

10 **(1E)-1-(1H-pyrazol-3-yl)ethanone (4-bromophenyl)hydrazone**

yellow solid (90% yield)

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 9.32 (s, 1H), 7.64 (d, 1H), 7.35 (d, 2H), 7.22 (d, 2H), 6.58 (d, 1H), 2.25 (s, 3H).

[M+H]<sup>+</sup> = 278.

15 **Ethyl 3-[(2E)-2-[1-(1H-pyrazol-3-yl)ethylidene]hydrazino]benzoate**

yellow solid (84% yield)

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 12.75 (br, 1H), 8.4-6.57 (m, 6H), 4.32 (q, 3H), 2.3 (s, 3H), 2.75 (t, 3H).

[M+H]<sup>+</sup> = 273.

20

**Example 11**

**5-chloro-2-(1H-pyrazol-3-yl)-1H-indole**

1-(1H-pyrazol-3-yl)ethanone (4-chlorophenyl) (0.5 g, 20.4 mmol) was added to polyphosphoric acid (5 mL) and the thick mixture was stirred at 90°C for 2 hours. Heating was removed and the mixture was let to cool to room temperature before pouring it into 25 mL of stirred water. After 30 minutes stirring, the precipitate was filtered and dried under reduced pressure to give 0.2 g (43%) of the title compound as a yellow solid

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.02 (s, 1H), 11.60 (s, 1H), 7.83 (s, 1H), 7.55 (s, 1H), 7.39 (d, 1H), 7.07 (sd, 1H), 6.73 (d, 2H).

30 [M+H]<sup>+</sup> = 218

By operating in an analogous way and by using (1E)-1-(1H-pyrazol-3-yl)ethanone phenylhydrazone in place of 1-(1H-pyrazol-3-yl)ethanone (4-chlorophenyl), the following compound was obtained:

**2-(1H-pyrazol-3-yl)-1H-indole**

white solid in 80% yield

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 12.9 (s, 1H), 11.32 (s, 1H), 7.78 (s, 1H), 7.47 (d, 1H), 7.36 (d, 1H), 7.02 (t, 1H), 6.94 (t, 1H), 6.67 (s, 1H), 6.68 (s, 1H).

5 [M+H]<sup>+</sup> = 184.

By operating in an analogous way and by using 1-(1H-pyrazol-3-yl)ethanone (4-bromophenyl) in place of 1-(1H-pyrazol-3-yl)ethanone (4-chlorophenyl), the following compound was obtained:

**5-bromo-2-(1H-pyrazol-3-yl)-1H-indole**

10 yellow solid in 75% yield

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.03 (s, 1H), 11.61 (s, 1H), 7.82 (s, 1H), 7.70 (s, 1H), 7.35 (d, 1H), 7.18 (s, 1H), 6.74 (s, 1H), 6.73 (s, 2H).

[M+H]<sup>+</sup> = 263.

15

**Example 12****2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

By starting from 4-[(2E)-2-[1-(1H-pyrazol-3-yl)ethylidene]hydrazino]benzonitrile as prepared in example 10, and by working as described in example 11 in the presence of polyphosphoric acid, the title compound was obtained as a yellow solid (75% yield).

20 <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.01 (s, 1H), 12.4 (s, 1H), 11.76 (s, 1H), 8.21 (s, 1H), 7.81 (s, 1H), 7.71 (dd, 1H), 7.44 (d, 1H), 6.89 (s, 1H), 6.75 (d, 1H).

[M+H]<sup>+</sup> = 227.

**Example 13****25 Ethyl 2-(1H-pyrazol-3-yl)-1H-indole-4-carboxylate**

A stirred mixture of ethyl 3-[(2E)-2-[1-(1H-pyrazol-3-yl)ethylidene]hydrazino]benzoate (18 g, 66 mmol) in polyphosphoric acid (200 g) was slowly heated at 80-85°C. After keeping for 15 minutes at this temperature, the resulting yellow cream was rapidly treated with iced water. The solid was filtered off, washed with water and dissolved in ethylacetate and washed with 0.1 M NaOH, then with brine. After drying over Na<sub>2</sub>SO<sub>4</sub>, the solvent was removed and the residue carefully chromatographed on silica gel eluting with CH<sub>2</sub>Cl<sub>2</sub>/Et<sub>2</sub>O 8/2. The fractions containing the compound were pooled, the solvent removed and the residue crystallized twice from Et<sub>2</sub>O to give 8.3 g of the title compound (51% yield).

30

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.10 (br, 1H), 11.80 (br, 1H), 8.07-6.78 (m, 6H), 4.34 (q, 2H), 1.38 (t, 3H).

[M+H]<sup>+</sup> = 256

- 5 By continuing the elution with the mixture CH<sub>2</sub>Cl<sub>2</sub>/Et<sub>2</sub>O 8/3, pooling the fraction and crystallizing trice from Et<sub>2</sub>O, 3.7 g of the following compound were obtained (21% yield):

**Ethyl 2-(1H-pyrazol-3-yl)-1H-indole-6-carboxylate**

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.20 (br, 1H), 11.60 (br, 1H), 8.17-6.43 (m, 6H), 4.53 (q, 2H), 1.41 (t, 3H).

10 [M+H]<sup>+</sup> = 256

**Example 14**

**2-(1H-pyrazol-3-yl)-1H-indole-4-carboxylic acid**

- 15 A stirred solution of ethyl 2-(1H-pyrazol-3-yl)-1H-indole-4-carboxylate (4 g, 15.7 mmol), 2 M NaOH (16 mL) in EtOH (100 mL) was refluxed for 4 hours. The solvent was partially removed and then, after dilution with ethylacetate, the reaction mixture was treated with 1 M HCl (33 mL). After extraction, the organic phase was thoroughly washed with brine and dried over Na<sub>2</sub>SO<sub>4</sub>. After removal of the solvent, the solid was crystallized from methanol to furnish 2.8 g (77% yield) of the title compound.

20 1H-NMR (DMSOd6), diagnostic signals (ppm): 13.1 (br, 1H), 12.6 (br, 2H), 8.05-6.77 (m, 6H).  
[M+H]<sup>+</sup> = 228.

- 25 By working in an analogous way and by using ethyl 2-(1H-pyrazol-3-yl)-1H-indole-6-carboxylate in place of ethyl 2-(1H-pyrazol-3-yl)-1H-indole-4-carboxylate, the following compound was obtained (69% yield):

**2-(1H-pyrazol-3-yl)-1H-indole-6-carboxylic acid**

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.23 (br, 1H), 12.7 (br, 2H), 8.13-6.85 (m, 6H).  
[M+H]<sup>+</sup> = 228.

30

**Example 15**

**2-(1H-pyrazol-3-yl)-1H-indole-5-carboxylic acid**

A solution of 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide (6 g, 26.5 mmol) in 220 mL of NaOH 20% (1.34 mol) and 200 mL of methanol was refluxed for 7 hours. The solvent was partially removed then treated with HCl 25% (175 mL). The obtained solid was filtered,

thoroughly washed with water and then dried to give 5 g (83%) of the title compound as a yellowish solid.

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.01 (s, 1H), 11.62 (s, 1H), 8.12 (s, 1H), 7.83 (s, 2H), 7.65 (d, 1H), 7.39 (d, 1H), 7.05 (s, 1H), 6.82 (s, 1H), 6.75 (s, 1H).

5 [M+H]<sup>+</sup> = 228

#### Example 16

##### **Methyl 2-(1H-pyrazol-3-yl)-1H-indole-5-carboxylate**

10 A solution of 2-(1H-pyrazol-3-yl)-1H-indole-5-carboxylic acid (4.5 g, 20 mmol) in MeOH (50 mL) and H<sub>2</sub>SO<sub>4</sub> 96% (1.5 mL) was refluxed overnight. After cooling the solution was concentrated, treated with water, basified with NaOH 2N and extracted with EtOAc. Organic phase was washed with water, dried (Na<sub>2</sub>SO<sub>4</sub>) and evaporated to give a crude solid. Purification by flash chromatography (hexane/EtOAc 4:6) afforded 4 g of the title compound as a yellow solid (84%).

15 <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.05 (s, 1H), 11.81 (s, 1H), 8.23 (s, 1H), 7.85 (s, 1H), 7.72 (d, 1H), 7.46 (d, 1H), 6.89 (s, 1H), 6.76 (d, 1H), 3.86 (s, 3H).

[M+H]<sup>+</sup> = 242.

#### Example 17

20 By working as described in example 9 and by starting from the suitable carboxylic acid derivative, e.g. 2-(1H-pyrazol-3-yl)-1H-indole-4-carboxylic acid, -5-carboxylic acid or -6-carboxylic acid, the following carboxamide derivatives were obtained:

##### **2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide**

37% yield.

25 <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 12.98 (br, 1H), 11.57 (br, 1H), 7.78 (m, 3H), 7.51-7.45 (m, 2H), 7.11 (m, 2H), 6.65 (d, 1H).

[M+H]<sup>+</sup> = 227.

##### **2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**

44% yield

30 <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 12.94 (br, 1H), 11.55 (br, 1H), 7.79 (m, 3H), 7.53-7.47 (m, 2H), 7.17 (m, 2H), 6.69 (d, 1H).

[M+H]<sup>+</sup> = 227.

##### **N-ethyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

- 1H-NMR (DMSOd6), diagnostic signals (ppm): 13.09 (s, 1H), 11.62 (s, 1H), 8.28 (t, 1H), 8.08 (s, 1H), 7.79 (s, 1H), 7.62 (d, 1H), 7.40 (d, 1H), 6.84 (d, 1H), 6.75 (d, 1H), 3.32 (m, 2H) 1.14 (q, 3H).  
[M+H]<sup>+</sup> = 256.
- 5    **N-isobutyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide**  
75% yield  
1H-NMR (DMSOd6), diagnostic signals (ppm): 13.01 (br, 1H), 11.56 (br, 1H), 8.20 (t, 1H), 7.83-6.64 (m, 6H), 3.15 (d, 2H), 1.85 (m, 1H), 0.96 (d, 6H).  
[M+H]<sup>+</sup> = 283.
- 10    **N-isobutyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**  
1H-NMR (DMSOd6), diagnostic signals (ppm): 13.02 (s, 1H), 11.62 (s, 1H), 8.28 (t, 1H), 8.09 (s, 1H), 7.84 (s, 1H), 7.62 (dd, 1H), 7.40 (d, 1H), 6.84 (s, 1H) 6.75 (s, 1H), 3.11 (t, 2H), 1.88 (m, 1H), 0.93 (s, 3H), 0.91 (s, 3H).  
[M+H]<sup>+</sup> = 283.
- 15    **N-isobutyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**  
67% yield.  
1H-NMR (DMSOd6), diagnostic signals (ppm): 13.01 (br, 1H), 11.56 (br, 1H), 8.20 (t, 1H), 7.83-6.64 (m, 6H), 3.15 (d, 2H), 1.89 (m, 1H), 0.93 (d, 6H).  
[M+H]<sup>+</sup> = 283.
- 20    **N-(3-hydroxypropyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide**  
53% yield  
1H-NMR (DMSOd6), diagnostic signals (ppm): 13.03 (br, 1H), 11.57 (br, 1H), 8.17 (t, 1H), 7.83-6.74 (m, 6H), 4.52 (t, 1H), 3.53 (m, 2H), 3.33 (m, 2H), 1.74 (m, 2H), 3.15 (d, 2H).  
[M+H]<sup>+</sup> = 285
- 25    **N-(3-hydroxypropyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**  
1H-NMR (DMSOd6), diagnostic signals (ppm): 13.00 (br, 1H), 11.61 (br, 1H), 8.27 (m, 1H), 8.07 (br, 1H), 7.84 (m, 1H), 7.59 (m, 1H), 7.41 (m, 1H), 6.82 (br, 1H), 4.49 (br, 1H), 3.33 (m, 4H), 1.71 (m, 2H)  
[M+H]<sup>+</sup> = 285.
- 30    **N-(3-hydroxypropyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**  
71% yield  
1H-NMR (DMSOd6), diagnostic signals (ppm): 13.13 (br, 1H), 11.59 (br, 1H), 8.13 (t, 1H), 7.91-6.75 (m, 6H), 4.56 (t, 1H), 3.59 (m, 2H), 3.23 (m, 2H), 1.76 (m, 2H), 3.18 (d, 2H).  
[M+H]<sup>+</sup> = 285.

**N-(2-methoxyethyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 11.64 (s, 1H), 8.32 (t, 1H), 8.10 (s, 1H), 7.79 (d, 1H), 7.63 (dd, 1H), 7.40 (d, 1H), 6.845 (d, 1H), 6.755 (d, 1H), 3.51-3.30 (m, 7H).

[M+H]<sup>+</sup> = 285.

5 **N-(2-methoxyethyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**

75% yield.

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.03 (br, 1H), 11.68 (br, 1H), 8.36 (t, 1H), 7.93-6.77 (m, 6H), 3.49 (t, 2H), 3.30 (t, 2H), 3.38 (s, 3H).

[M+H]<sup>+</sup> = 285.

10 **N-cyclopentyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 11.61 (br, 2H), 8.11 (br, 1H), 8.09 (br, 1H), 7.79 (m, 1H), 7.63 (m, 1H), 7.40 (m, 1H), 6.84 (br, 1H), 6.75 (m, 1H), 4.26 (m, 1H), 1.90, 1.75, 1.56 (m, 8H)

[M+H]<sup>+</sup> = 295.

15 **N-(4-hydroxybutyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.0 (s, 1H), 11.61 (s, 1H), 8.27 (t, 1H), 8.07 (s, 1H), 7.83 (s, 1H), 7.61 (d, 1H), 7.40 (d, 1H), 6.82 (s, 1H), 6.75 (d, 1H), 4.41 (s, 1H), 3.45-3.28 (m, 4H), 1.62-1.55 (m, 2H), 1.52-1.47 (m, 2H).

[M+H]<sup>+</sup> = 299.

20 **N-(4-hydroxybutyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**

80% yield

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.03 (br, 1H), 11.66 (br, 1H), 8.32 (t, 1H), 7.92-6.76 (m, 6H), 3.45 (t, 2H), 3.30 (t, 2H), 1.51 (m, 4H).

[M+H]<sup>+</sup> = 299

25 **N-(2-furylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide**

83% yield

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.00 (br, 1H), 11.60 (br, 1H), 8.17 (t, 1H), 7.84-6.31 (m, 9H), 4.77 (d, 2H), 3.33 (m, 5H), 1.26 (m, 4H).

25    **N-(4-fluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.01 (br, 1H), 11.65 (br, 1H), 8.89 (m, 1H), 8.14 (br, 1H), 7.84 (br, 1H), 7.65 (m, 1H), 7.41 (m, 1H), 7.39 (m, 2H), 7.16 (m, 2H), 6.83 (br, 1H), 6.75 (m, 1H), 4.48 (m, 2H).

[M+H]<sup>+</sup> = 335.

30    **N-(4-fluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**

85% yield

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.04 (br, 1H), 11.70 (br, 1H), 8.93 (t, 1H), 7.97-6.77 (m, 10H), 4.50 (d, 2H).

[M+H]<sup>+</sup> = 335.

**N-[3-(1H-imidazol-1-yl)propyl]-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.01 (s, 1H), 11.64 (s, 1H), 8.36 (t, 1H), 8.09 (s, 1H), 7.84 (s, 2H), 7.62 (d, 1H), 7.41 (d, 1H), 7.30 (s, 1H), 7.30 (s, 1H), 6.84 (s, 1H), 6.755 (d, 1H), 4.08 (t, 2H), 3.30-3.26 (m, 2H), 2.04-1.97 (m, 2H).

5 [M+H]<sup>+</sup> = 335.

**N-(2-anilinoethyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide**

47% yield

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.02(br, 1H), 11.59 (br, 1H), 8.29 (m, 1H), 7.84-6.55 (m, 11H), 5.73 (m, 1H), 3.35-3.32 (m, 4H).

10 [M+H]<sup>+</sup> = 346.

**N-(2-anilinoethyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.01 (s, 1H), 11.63 (s, 1H), 8.41 (t, 1H), 8.10 (s, 1H), 7.84 (s, 1H), 7.63 (d, 1H), 7.41 (d, 1H), 7.10 (t, 2H), 6.83 (s, 1H), 6.76 (d, 1H), 6.64 (d, 2H), 6.54 (t, 1H), 5.71 (t, 1H), 3.47 (q, 2H), 3.22 (q, 2H).

15 [M+H]<sup>+</sup> = 346.

**N-(2-anilinoethyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide**

59% yield

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.05(br, 1H), 11.61 (br, 1H), 8.32 (m, 1H), 7.86-6.63 (m, 11H), 5.75 (m, 1H), 3.37-3.31 (m, 4H).

20 [M+H]<sup>+</sup> = 346.

**N-(4-methoxy-2-methylphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

1H-NMR (DMSOd6), diagnostic signals (ppm): 12.99 (s, 1H), 11.69 (s, 1H), 9.60 (s, 1H), 8.24 (s, 1H), 7.81 (s, 1H), 7.74(dd, 1H), 7.46 (d, 1H), 7.23 (d, 1H), 6.89 (s, 1H), 6.86 (d, 1H), 6.79 (dd, 1H), 6.775 (d, 1H), 3.77 (s, 3H), 2.24 (s, 3H).

25 [M+H]<sup>+</sup> = 347.

**N-(2,5-difluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

1H-NMR (DMSOd6), diagnostic signals (ppm): 13.02 (br, 1H), 11.67 (br, 1H), 8.90 (m, 1H), 8.16 (br, 1H), 7.83 (br, 1H), 7.66 (m, 1H), 7.45 (m, 1H), 7.26 (m, 1H), 7.15 (m, 2H), 6.86 (br, 1H), 6.76 (m, 1H), 4.52 (m, 2H)

30 [M+H]<sup>+</sup> = 353.

**N-(3-morpholin-4-ylpropyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide**

1H-NMR (DMSOd6), diagnostic signals (ppm): 11.68 (br, 2H) 8.50 (m, 1H), 8.10 (br, 1H), 7.80 (br, 1H), 7.62 (m, 1H), 7.51 (br, 1H), 6.85 (br, 1H), 6.75 (m, 1H), 3.35 (br, 12H), 1.95 (m, 2H).

[M+H]<sup>+</sup> = 354.

**5-[(4-benzylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole**

1H-NMR (DMSO-d<sub>6</sub>), diagnostic signals (ppm): 13.00 (br, 1H), 11.60 (br, 1H), 7.83 (br, 1H), 7.57 (br, 1H), 7.41 (m, 1H), 7.34 (m, 5H), 7.13 (m, 1H), 6.79 (br, 1H), 6.73 (m, 1H), 3.53 (br, 6H), 2.42 (br, 4H)

[M+H]<sup>+</sup> = 386.

**Example 18**

By working as above described in any previous example and by using the suitable starting material as formerly reported, the following compounds of formula (I) of the invention may be thus obtained:

1. 2-(1H-pyrazol-3-yl)-1H-indole
2. 4-fluoro-2-(1H-pyrazol-3-yl)-1H-indole
3. 5-fluoro-2-(1H-pyrazol-3-yl)-1H-indole
- 15 4. 6-fluoro-2-(1H-pyrazol-3-yl)-1H-indole
5. 4-chloro-2-(1H-pyrazol-3-yl)-1H-indole
6. 5-chloro-2-(1H-pyrazol-3-yl)-1H-indole
7. 6-chloro-2-(1H-pyrazol-3-yl)-1H-indole
8. 4-bromo-2-(1H-pyrazol-3-yl)-1H-indole
- 20 9. 5-bromo-2-(1H-pyrazol-3-yl)-1H-indole
10. 6-bromo-2-(1H-pyrazol-3-yl)-1H-indole
11. 4-cyano-2-(1H-pyrazol-3-yl)-1H-indole
12. 5-cyano-2-(1H-pyrazol-3-yl)-1H-indole
13. 6-cyano-2-(1H-pyrazol-3-yl)-1H-indole
- 25 14. 4-nitro-2-(1H-pyrazol-3-yl)-1H-indole
15. 5-nitro-2-(1H-pyrazol-3-yl)-1H-indole
16. 6-nitro-2-(1H-pyrazol-3-yl)-1H-indole
17. 4-methyl-2-(1H-pyrazol-3-yl)-1H-indole
18. 5-methyl-2-(1H-pyrazol-3-yl)-1H-indole
- 30 19. 6-methyl-2-(1H-pyrazol-3-yl)-1H-indole
20. 4-trifluoromethyl-2-(1H-pyrazol-3-yl)-1H-indole
21. 5-trifluoromethyl-2-(1H-pyrazol-3-yl)-1H-indole
22. 6-trifluoromethyl-2-(1H-pyrazol-3-yl)-1H-indole
23. 4-methoxy-2-(1H-pyrazol-3-yl)-1H-indole

24. 5-methoxy-2-(1H-pyrazol-3-yl)-1H-indole  
25. 6-methoxy-2-(1H-pyrazol-3-yl)-1H-indole  
26. 4-hydroxy-2-(1H-pyrazol-3-yl)-1H-indole  
27. 5-hydroxy-2-(1H-pyrazol-3-yl)-1H-indole  
5 28. 6-hydroxy-2-(1H-pyrazol-3-yl)-1H-indole  
29. 2-(1H-pyrazol-3-yl)-1H-indole-4-carboxylic acid  
30. 2-(1H-pyrazol-3-yl)-1H-indole-5-carboxylic acid  
31. 2-(1H-pyrazol-3-yl)-1H-indole-6-carboxylic acid  
32. methyl 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
10 33. methyl 5-(1H-indol-2-yl)-1H-pyrazole-5-carboxylate  
34. methyl 5-(1H-indol-2-yl)-1H-pyrazole-6-carboxylate  
35. ethyl 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
36. ethyl 5-(1H-indol-2-yl)-1H-pyrazole-5-carboxylate  
37. ethyl 5-(1H-indol-2-yl)-1H-pyrazole-6-carboxylate  
15 38. i-butyl 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
39. i-butyl 5-(1H-indol-2-yl)-1H-pyrazole-5-carboxylate  
40. i-butyl 5-(1H-indol-2-yl)-1H-pyrazole-6-carboxylate  
41. 2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
42. 2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
20 43. 2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
44. N-methyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
45. N-methyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
46. N-methyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
47. N-ethyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
25 48. N-ethyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
49. N-ethyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
50. N-propyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
51. N-propyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
52. N-propyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
30 53. N-isopropyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
54. N-isopropyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
55. N-isopropyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
56. N-butyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
57. N-butyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide

58. N-butyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
59. N-isobutyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
60. N-isobutyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
61. N-isobutyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
5 62. N-terbutyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
63. N-terbutyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
64. N-terbutyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
65. N-phenyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
66. N-phenyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
10 67. N-phenyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
68. N-benzyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
69. N-benzyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
70. N-benzyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
71. N-(2-methoxyethyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
15 72. N-(2-methoxyethyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
73. N-(2-methoxyethyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
74. N-(3-hydroxypropyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
75. N-(3-hydroxypropyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
76. N-(3-hydroxypropyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
20 77. 4-(piperidin-1-ylcarbonyl)-2-(1H-pyrazol-3-yl)-1H-indole  
78. 5-(piperidin-1-ylcarbonyl)-2-(1H-pyrazol-3-yl)-1H-indole  
79. 6-(piperidin-1-ylcarbonyl)-2-(1H-pyrazol-3-yl)-1H-indole  
80. N-cyclopentyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
81. N-cyclopentyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
25 82. N-cyclopentyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
83. 4-[(4-benzylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole  
84. 5-[(4-benzylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole  
85. 6-[(4-benzylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole  
86. 2-(1H-pyrazol-3-yl)-N-(tetrahydrofuran-2-ylmethyl)-1H-indole-4-carboxamide  
30 87. 2-(1H-pyrazol-3-yl)-N-(tetrahydrofuran-2-ylmethyl)-1H-indole-5-carboxamide  
88. 2-(1H-pyrazol-3-yl)-N-(tetrahydrofuran-2-ylmethyl)-1H-indole-6-carboxamide  
89. 1-[[2-(1H-pyrazol-3-yl)-1H-indol-4-yl]carbonyl]piperidin-4-ol  
90. 1-[[2-(1H-pyrazol-3-yl)-1H-indol-5-yl]carbonyl]piperidin-4-ol  
91. 1-[[2-(1H-pyrazol-3-yl)-1H-indol-6-yl]carbonyl]piperidin-4-ol

92. N-(3-dimethylamino)propyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
93. N-(3-dimethylamino)propyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
94. N-(3-dimethylamino)propyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
95. 2-(1H-pyrazol-3-yl)-N-(pyridin-2-ylmethyl)-1H-indole-4-carboxamide  
5 96. 2-(1H-pyrazol-3-yl)-N-(pyridin-2-ylmethyl)-1H-indole-5-carboxamide  
97. 2-(1H-pyrazol-3-yl)-N-(pyridin-2-ylmethyl)-1H-indole-6-carboxamide  
98. 2-(1H-pyrazol-3-yl)-N-(2-pyridin-2-ylethyl)-1H-indole-4-carboxamide  
99. 2-(1H-pyrazol-3-yl)-N-(2-pyridin-2-ylethyl)-1H-indole-5-carboxamide  
100. 2-(1H-pyrazol-3-yl)-N-(2-pyridin-2-ylethyl)-1H-indole-6-carboxamide  
10 101. N-(4-methoxyphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
102. N-(4-methoxyphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
103. N-(4-methoxyphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
104. N-(4-fluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
105. N-(4-fluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
15 106. N-(4-fluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
107. N-(2,5-difluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
108. N-(2,5-difluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
109. N-(2,5-difluorobenzyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
110. N-(2-anilinoethyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
20 111. N-(2-anilinoethyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
112. N-(2-anilinoethyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
113. N-(5-hydroxy-1H-pyrazol-3-yl)propyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
114. N-(5-hydroxy-1H-pyrazol-3-yl)propyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
115. N-(5-hydroxy-1H-pyrazol-3-yl)propyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
25 116. N-(3-morpholin-4-ylpropyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
117. N-(3-morpholin-4-ylpropyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
118. N-(3-morpholin-4-ylpropyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
119. N-(2-phenylamino-ethyl)propyl-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
120. N-(2-phenylamino-ethyl)propyl-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
30 121. N-(2-phenylamino-ethyl)propyl-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
122. N-[2-(1H-imidazol-4-yl)-ethyl]-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
123. N-[2-(1H-imidazol-4-yl)-ethyl]-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
124. N-[2-(1H-imidazol-4-yl)-ethyl]-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
125. N-[3-(1H-imidazol-1-yl)propyl]-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide

127. N-[3-(1H-imidazol-1-yl)propyl]-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
128. N-(4-hydroxy-butyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
129. N-(4-hydroxy-butyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
5 130. N-(4-hydroxy-butyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
131. N-(2-hydroxymethyl-phenyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
132. N-(2-hydroxymethyl-phenyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
133. N-(2-hydroxymethyl-phenyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
134. N-(4-methoxy-2-methylphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
10 135. N-(4-methoxy-2-methylphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
136. N-(4-methoxy-2-methylphenyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
137. N-(2-furylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
138. N-(2-furylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
139. N-(2-furylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
15 140. N-(pyridin-4-ylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
141. N-(pyridin-4-ylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
142. N-(pyridin-4-ylmethyl)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
143. N-[(methoxycarbonyl)methyl]-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
144. N-[(methoxycarbonyl)methyl]-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
20 145. N-[(methoxycarbonyl)methyl]-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
146. N-(ethane-2-sulfonic acid)-2-(1H-pyrazol-3-yl)-1H-indole-4-carboxamide  
147. N-(ethane-2-sulfonic acid)-2-(1H-pyrazol-3-yl)-1H-indole-5-carboxamide  
148. N-(ethane-2-sulfonic acid)-2-(1H-pyrazol-3-yl)-1H-indole-6-carboxamide  
149. 4-[(4-methylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole  
25 150. 5-[(4-methylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole  
151. 6-[(4-methylpiperazin-1-yl)carbonyl]-2-(1H-pyrazol-3-yl)-1H-indole  
152. 2-(1H-pyrazol-3-yl)-1H-indol-4-amine  
153. 2-(1H-pyrazol-3-yl)-1H-indol-5-amine  
154. 2-(1H-pyrazol-3-yl)-1H-indol-6-amine  
30 155. N-[2-(1H-pyrazol-3-yl)-1H-indol-4-yl]acetamide  
156. N-[2-(1H-pyrazol-3-yl)-1H-indol-5-yl]acetamide  
157. N-[2-(1H-pyrazol-3-yl)-1H-indol-6-yl]acetamide  
158. N-[2-(1H-pyrazol-4-yl)-1H-indol-4-yl]propanamide  
159. N-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]propanamide

160. N-[2-(1H-pyrazol-4-yl)-1H-indol-6-yl]propanamide  
161. 2-methyl-N-[2-(1H-pyrazol-4-yl)-1H-indol-4-yl]propanamide  
162. 2-methyl-N-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]propanamide  
163. 2-methyl-N-[2-(1H-pyrazol-4-yl)-1H-indol-6-yl]propanamide  
5 164. N-[2-(1H-pyrazol-4-yl)-1H-indol-4-yl]butanamide  
165. N-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]butanamide  
166. N-[2-(1H-pyrazol-4-yl)-1H-indol-6-yl]butanamide  
167. N-[2-(1H-pyrazol-4-yl)-1H-indol-4-yl]benzamide  
168. N-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]benzamide  
10 169. N-[2-(1H-pyrazol-4-yl)-1H-indol-6-yl]benzamide  
170. N-[2-(1H-pyrazol-4-yl)-1H-indol-4-yl]phenylacetamide  
171. N-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]phenylacetamide  
172. N-[2-(1H-pyrazol-4-yl)-1H-indol-6-yl]phenylacetamide  
173. 3-methyl-N-[2-(1H-pyrazol-4-yl)-1H-indol-4-yl]butanamide  
15 174. 3-methyl-N-[2-(1H-pyrazol-3-yl)-1H-indol-4-yl]butanamide  
175. 3-methyl-N-[2-(1H-pyrazol-6-yl)-1H-indol-4-yl]butanamide  
176. N-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]tiophenecarboxamide  
177. N-methyl-N'-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]urea  
178. N-propyl-N'-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]urea  
20 179. N-benzyl-N'-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]urea  
180. N-phenyl-N'-[2-(1H-pyrazol-4-yl)-1H-indol-5-yl]urea  
181. 5-(1H-indol-2-yl)-1H-pyrazol-4-amine  
182. 5-(1H-indol-2-yl)-1H-pyrazole-4-carbonitrile  
183. 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylic acid  
25 184. methyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
185. ethyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
186. propyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
187. i-propyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
188. butyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
30 189. i-butyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxylate  
190. 5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide  
191. N-methyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide  
192. N-ethyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide  
193. N-propyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide

194. N-i-propyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide
195. N-butyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide
196. N-i-butyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide
197. N-benzyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide
- 5 198. N-phenyl-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide
199. N-[3-(dimethylamino)propyl]-5-(1H-indol-2-yl)-1H-pyrazole-4-carboxamide.

## CLAIMS

1. A method for treating diseases caused by and/or associated with an altered protein kinase activity, by administering to a mammal in need thereof an effective amount of a compound of formula (I)

5

wherein

**R** is hydrogen, halogen, nitro, cyano, hydroxy, or it is a group optionally further substituted selected from straight or branched  $C_1$ - $C_6$  alkyl or  $C_1$ - $C_6$  alkoxy,  $C_3$ - $C_6$  cycloalkyl, aryl, heterocyclyl, or it is a group - $NR'R''$ , - $CONR'R''$ , - $NR'COR''$ , - $COOR'$  or

10 - $SO_2NR'R''$ , wherein  $R'$  and  $R''$  are, the same or different and independently in each occasion, a hydrogen atom or a group optionally further substituted selected from straight or branched  $C_1$ - $C_6$  alkyl,  $C_3$ - $C_6$  cycloalkyl, aryl or heterocyclyl; or, taken together with the nitrogen atom to which they are attached,  $R'$  and  $R''$  may form a 5 or 6 membered nitrogen containing heterocycle, optionally comprising one additional heteroatom selected among N, O or S;

15 **R<sub>1</sub>** has the meanings above reported to **R** but other than hydroxy;

**m** is an integer from 1 to 4;

**n** is 1 or 2;

and the pharmaceutically acceptable salts thereof.

20 2. The method according to claim 1 wherein the disease is a cell proliferative disorder selected from the group consisting of cancer, Alzheimer's disease, viral infections, autoimmune diseases and neurodegenerative disorders.

25 3. The method according to claim 2 wherein the cancer is selected from the group consisting of carcinoma, squamous cell carcinoma, hematopoietic tumors of myeloid or lymphoid lineage, tumors of mesenchymal origin, tumors of the central and peripheral nervous system, melanoma, seminoma, teratocarcinoma, osteosarcoma, xeroderma pigmentosum, keratoxanthoma, thyroid follicular cancer, and Kaposi's sarcoma.

4. The method according to claim 2 wherein the cell proliferative disorder is selected from the group consisting of benign prostate hyperplasia, familial adenomatosis polyposis, neuro-fibromatosis, psoriasis, vascular smooth cell proliferation associated with atherosclerosis, pulmonary fibrosis, arthritis, glomerulonephritis and post-surgical stenosis and restenosis.

5. The method according to claim 1 which provides tumor angiogenesis and metastasis inhibition as well as treatment of organ transplant rejection and host versus graft disease.

6. The method according to claim 1 which provides treatment or prevention of radiotherapy-induced or chemotherapy-induced alopecia.

7. The method according to claim 1 further comprising subjecting the mammal in need thereof to a radiation therapy or chemotherapy regimen in combination with at least one cytostatic or cytotoxic agent.

8. The method according to claim 1 wherein the mammal in need thereof is a human.

9. A method for inhibiting protein kinase activity which comprises contacting the said protein kinase with an effective amount of a compound of formula (I) as defined in claim 1.

10. A compound of formula (I)

wherein

**R** is hydrogen, halogen, nitro, cyano, hydroxy, or it is a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl or C<sub>1</sub>-C<sub>6</sub> alkoxy, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl, heterocyclyl, or it is a group -NR'R'', -CONR'R'', -NR'COR'', -COOR' or -SO<sub>2</sub>NR'R'', wherein R' and R'' are, the same or different and independently in each occasion, a hydrogen atom or a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl or heterocyclyl; or, taken together with the nitrogen atom to

which they are attached, R' and R" may form a 5 or 6 membered nitrogen containing heterocycle, optionally comprising one additional heteroatom selected among N, O or S;

R<sub>1</sub> has the meanings above reported to R but other than hydroxy;

m is an integer from 1 to 4;

5 n is 1 or 2;

and the pharmaceutically acceptable salts thereof.

11. A compound of formula (I) according to claim 10 wherein R is a hydrogen or halogen atom, R<sub>1</sub> is a hydrogen atom or a group selected from cyano, -COOR' or  
10 -CONR'R", wherein R' and R" are as defined in claim 10, and m and n are both 1.

12. A compound of formula (I) according to claim 10 wherein R is a group -COOR' or -CONR'R", wherein R' and R" are as defined in claim 10, R<sub>1</sub> is hydrogen, and m and n are both  
15 1.

13. A compound of formula (I) according to claim 10 wherein the optional substituents to any one of the groups R, R<sub>1</sub>, R' and R" is selected from: halogen, nitro, oxo groups (=O), carboxy, cyano, alkyl, perfluorinated alkyl, hydroxyalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heterocyclyl, amino groups and derivatives thereof such as alkylamino, dialkylamino,  
20 cycloalkylamino, arylamino, diarylamino, arylalkylamino, ureido, alkylureido or arylureido; carbonylamino groups and derivatives thereof such as formylamino, alkylcarbonylamino, alkenylcarbonylamino, arylcarbonylamino, alkoxycarbonylamino; hydroxy groups and derivatives thereof such as alkoxy, aryloxy, heterocyclyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkenyloxy or alkylideneaminooxy; carbonyl groups and derivatives thereof such as  
25 alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxy, cycloalkyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl; sulfurated derivatives such as alkylthio, arylthio, alkylsulfonyl, arylsulfonyl, alkylsulfinyl, arylsulfinyl, arylsulfonyloxy, aminosulfonyl, alkylaminosulfonyl or dialkylaminosulfonyl.

30 14. Any specific compound of formula (I) according to claim 10, optionally in the form of a pharmaceutically acceptable salt, as per the list provided in example 18.

15. A process for preparing the compounds of formula (I) and the pharmaceutically acceptable salts, according to claim 10, which process comprises:

a) coupling, in the presence of a suitable catalyst, the compound of formula (II) with the compound of formula (III)

wherein R, R<sub>1</sub>, m and n are as defined in claim 10; Q and Q', the same or different from each other, may represent suitable nitrogen protective groups or polymeric solid supports; X is a halogen atom or a group selected from methylsulfonyloxy, trifluoromethylsulfonyloxy, phenylsulfonyloxy or fluorido-sulphate (-OSO<sub>2</sub>F); and Z is selected from halogen, boronic acid, boronate, trialkyl-stannane, trihalostannane, zinc halide, cuprate, alkylidihalo-silane or a Grignard salt; so as to obtain a compound of formula (IV)

18. The process of claim 15 wherein Q and Q', as nitrogen protecting groups, are each independently selected from trityl, trimethylsilylethoxymethyl (SEM), tert-butoxycarbonyl (boc), ethylcarbamate or trichloroethylcarbamate.

5 19. The process of claim 15 wherein Q and Q', as suitable polymeric supports, are each independently selected from trityl resin, chloro-trityl resin, methylisocyanate resin, p-nitrophenyl carbonate Wang resin or isocyanate polystyrenic resin.

20. A process for preparing the compounds of formula (I) and the pharmaceutically acceptable salts, according to claim 10, which process comprises:

10 d) reacting an hydrazine derivative of formula (V) with a pyrazole derivative of formula (VI)

wherein R, R<sub>1</sub>, m and n are as defined in claim 10, so as to obtain a compound of formula (VII)

15 e) reacting the compound of formula (VII) under acidic conditions and in the presence of a Lewis acid, so as to obtain a compound of formula (I); and,

f) optionally converting it into another compound of formula (I) and/or into a pharmaceutically acceptable salt thereof.

20 21. The process of claim 21 wherein, in step (e), the Lewis acid is selected from zinc chloride, boron trifluoride, triethylaluminum or trifluoroacetic anhydride.

22. A library of two or more compounds of formula (I)

wherein

- 5 **R** is hydrogen, halogen, nitro, cyano, hydroxy, or it is a group optionally further substituted selected from straight or branched C<sub>1</sub>-C<sub>6</sub> alkyl or C<sub>1</sub>-C<sub>6</sub> alkoxy, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl, heterocyclyl, or it is a group -NR'R'', -CONR'R'', -NR'COR'', -COOR' or -SO<sub>2</sub>NR'R'', wherein R' and R'' are, the same or different and independently in each occasion, a hydrogen atom or a group optionally further substituted selected from straight or branched
- 10 C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>6</sub> cycloalkyl, aryl or heterocyclyl; or, taken together with the nitrogen atom to which they are attached, R' and R'' may form a 5 or 6 membered nitrogen containing heterocycle, optionally comprising one additional heteroatom selected among N, O or S;
- R<sub>1</sub>** has the meanings above reported to R but other than hydroxy;
- m** is an integer from 1 to 4;
- 15 **n** is 1 or 2;
- and the pharmaceutically acceptable salts thereof.

23. A pharmaceutical composition comprising a therapeutically effective amount of a compound of formula (I), as defined in claim 10, and at least one pharmaceutically acceptable

20 excipient, carrier and/or diluent.

24. A pharmaceutical composition according to claim 23 further comprising one or more chemotherapeutic agents.

25 25. A product or kit comprising a compound of formula (I) as defined in claim 10 or a pharmaceutical compositions thereof as defined in claim 23, and one or more chemotherapeutic agents, as a combined preparation for simultaneous, separate or sequential use in anticancer therapy.

30 26. A compound of formula (I) as defined in claim 10 for use as a medicament.

27. Use of a compound of formula (I) as defined in claim 10 in the manufacture of a medicament with antitumor activity.
